intended to reduce the probability and or consequences of a major incident that would have a detrimental impact to the employees the public s well being onsite or offsite properties the environment and most important to a company itself its continued business operation and survival Process hazard analysis reviews are not intended to identify the minor slips trips or falls these are the responsibility of the company s general safety requirements and are well established The process hazard analysis is looking for the major incidents which have the potential for severe impacts HAZOP and What If reviews are two of the most common petroleum and chemical industries qualitative methods used to conduct process hazard analyses Up to 80% of a company s process hazard analyses may consist of HAZOP and What If reviews with the remainder 20% from checklist Fault Tree Analysis Event Tree Failure Mode and Effects Analysis etc An experienced review team can use the analysis to generate possible deviations from design construction modification and operating intent that define potential consequences These consequences can then be prevented and or mitigated by the application of the appropriate safeguards
