Histology For Pathologists:

Histology for Pathologists Stacey E. Mills, 2012-07-16 A strong grounding in basic histology is essential for all pathologists. However, there had always been a gap between histology and pathology in which histologic information specifically for the pathologist was often lacking. *Histology for Pathologists* deals with the microscopic features of normal human tissues from the perspective of the surgical pathologist. This is the only text that uses human vs animal tissues for the histology. It is the best reference in the literature for information on normal histology and as such is essential for all clinical pathologists. Written by pathologists for pathologists, the new edition updates the pathologist's understanding of normal histology up to date with the incremental advances made in the last five years. The 3rd edition has become a classic purchased by virtually all residents beginning their pathology training as well as pathologists in practice. The 4th edition builds on that substantial foundation. The table of contents remains essentially the same with the exception of some changes in authorship.

Includes important updates throughout, covering not only traditional normal histology but also its morphologic spectrum, variant normal histology, as well as recent advances in immunohistochemistry that expand the spectrum of antigen expression in normal tissues. Contains new images in over 50% of the chapters, including images of the most common abnormal findings in each organ system, helping provide direct contrast with adjacent normal histology, i.e., what is normal and what is not. Provides the at-a-glance information necessary for diagnosis or adequacy evaluation at the time of procedure using a concise, synoptic writing style. Features more than 2,100 print and online images, including carefully annotated photomicrographs, gross images, electron micrographs, and full-color medical illustrations to help practicing and in-training pathologists reach a confident diagnosis.
