Machines, Mechanism and Robotics Rajeev Kumar, Vishal S. Chauhan, Mohammad Talha, Himanshu Pathak, 2021-07-21 This volume includes select papers presented during the 4th International and 19th National Conference on Machines and Mechanism iNaCoMM 2019 held in Indian Institute of Technology Mandi It presents research on various aspects of design and analysis of machines and mechanisms by academic and industry researchers

Dynamic Decoupling of Robot Manipulators Vigen Arakelian, 2018-02-20 This book presents the latest results in the field of dynamic decoupling of robot manipulators obtained in France Russia China and Austria Manipulator dynamics can be highly coupled and nonlinear The complicated dynamics result from varying inertia interactions between the different joints and nonlinear forces such as Coriolis and centrifugal forces The dynamic decoupling of robot manipulators allows one to obtain a linear system i e single input and single output system with constant parameters This simplifies the optimal control and accumulation of energy in manipulators There are two ways to create the dynamically decoupled manipulators via optimal mechanical design or control This work emphasises mechatronic solutions These will certainly improve the known design concepts permitting the dynamic decoupling of serial manipulators with a relatively small increase in total mass of the moving links taking into account the changing payload For the first time such an approach has been applied on serial manipulators Also of great interest is the dynamic decoupling control of parallel manipulators Firstly the dynamic model of redundant multi axial vibration table with load has been established and secondly its dynamic coupling characteristics have been analyzed The discussed methods and applications of dynamic decoupling of robot manipulators are illustrated via CAD simulations and experimental tests

Foundations of Robotics Bruno
Siciliano, Luigi Villani, Giuseppe Oriolo, Alessandro De Luca, 2025-09-06 This textbook explores the foundational principles of
robotics focusing on its core pillars modeling planning and control Balancing mathematical rigor and physical intuition a
coherent formalism is established and used throughout the book At the same time technological challenges and application
driven solutions are given appropriate consideration With a general perspective that includes both fixed base manipulators
and mobile robots the book presents the essential tools for understanding key topics such as kinematics statics trajectory
planning dynamics and motion control In its second part more advanced topics are addressed including wheeled robots visual
control motion planning force control flexible robots and cooperative manipulation To support the learning process
appendices provide essential background material on linear algebra mechanics differential geometry control theory and
graph search algorithms The practical implementation of the methodologies is emphasized throughout with over 50 worked
examples and case studies many supported by simulations Additionally more than 190 end of chapter problems are included
with a Solutions Manual available for instructors adopting the book for their courses Foundations of Robotics is designed for
use as a textbook in both undergraduate and graduate robotics courses within engineering programs making it an ideal
resource for students and educators alike

Rondeau, 1999 This conference which was originally planned as workshop took place on October 19 to 22 1998 in St Hubert Montreal The idea of a conference devoted to Space Robotics matured when two IFAC Technical Committees Aerospace Control and Robotics decided to co sponsor such an event The final decision converged with technological maturity of Space Robotics itself It became obvious that robotics is a unique but viable technology that can be used in Space exploration Robotics is the intelligent connection of perception to action This broad

definition of robotics encompasses both science and technology In the early days the changing technology in manufacturing was driving the development in robotics New manufacturing technology required new economical and efficient methods of production Development was geared towards robots in the form of manipulators In later years the development was driven by demand in service industry military and special applications One of those special applications is related to Space and its exploration The rapid development in Space related technologies brought forward questions about the need for automation technologies that would allow for operations in Space in an efficient and safe way Some Space operations could not have possibly been done without extensive use of automation and especially robotics There are numerous robotics meetings and conferences across the world but it became obvious that the meetings addressing particular problems in space robotics would be useful and helpful The Program Committee tried to include in conference presentations all specific fields of robotics that are important in Space applications On manipulators side kinematics manipulation dexterity sensors and control systems have been covered On mobile robots side new control techniques telerobotics nonholonomic systems and trajectory planning have been considered Also applications and Space operations have been reviewed Altogether 30 papers were selected and accepted by the International Organizing Committee Papers were presented in 8 sessions in three days There were also three keynote speeches presented by invited speakers and three distinguished speakers to present keynote lectures on three separate occasions Speakers were chosen in order to give a broad overview of space robotics activities in all involved countries Participants came from Belgium Canada France Germany Italy Japan Netherlands Poland United Kingdom and the USA In day 1 eight papers were presented in two sessions Session 1 was related to Dextrous Robots and Session 2 to Mobile Robots Part 1 and 2 Day 2 included a keynote speech on the topic of Robotics and On Board Autonomy For What and How Far Can We Go followed by Session 3 Robot Controllers and Session 4 Vision Systems and Control Day 3 consisted of 5 sessions Session 5 Manipulation Control Session 6 Kinematics Session 7 Nonholonomic Systems Session 8 Space Operation Part 1 and Part 2
