significant innovation since the introduction of the universal journal in SAP S/4HANA. The business requirements behind UPA will be familiar to anyone who has worked in a multinational organization. What is new is the architecture: ledger and currency settings are used consistently across all financial applications within the organization. If the universal journal was the single document that combined information from the general ledger, asset accounting, controlling, material ledger, and margin analysis, then Universal Parallel Accounting takes the idea a step further by providing consistent ledger and currency settings across all finance applications. This book provides a comprehensive introduction to Universal Parallel Accounting and explains how it is different from previous approaches. Troubleshoot the challenges of working with multiple accounting principles, fiscal year calendars, and currencies in subsidiaries alongside the common accounting principle, fiscal year calendar, and group currency. Take a closer look at ledgers, accounting principles, and fiscal year variants. Explore key changes to asset accounting, overhead accounting, and inventory accounting. Compare and contrast the approach to calculating WIP and variances instead of calculating at period end closing; they are calculated with each goods movement and confirmation. Learn more about the new way to recognize revenue. This book expertly guides readers through key updates to parallel accounting in SAP. Introduction: Parallel Accounting in SAP S/4HANA. Use Cases for Universal Parallel Accounting. How Universal Parallel Accounting Differs from Previous Approaches. Explore key changes to asset accounting, overhead accounting, and inventory accounting.

*Planning and Reporting in BI-supported Controlling*. Dietmar Schön, 2023-07-24. Planning and reporting solutions in many companies still suffer from poor data quality; are insufficiently integrated and are often time- and cost-intensive. This practice-oriented book shows step-by-step how things can be done differently. It systematically shows how modern planning and reporting systems in BI-supported controlling can be set up with the use of data warehouse and big data technology and usefully supplemented with AI-supported features. For the 4th edition, the book has been comprehensively updated. The extensive controlling cockpit example has been expanded. It now contains suggestions for the areas of corporate management, operational and strategic controlling, sales, production, purchasing, and project management. In addition, the latest developments in BI-supported controlling with the support of traditional and explorative BI are highlighted, including data mining, predictive analytics, artificial intelligence, RPA, chatbots, data discovery, data visualization, app technology, self-service BI, and cloud computing. Further innovations concern the topics of data quality and data modeling. The final chapter is Mobile BI, which deals with the expansion of powerful mobile analysis and planning solutions with the help of tablets, mobile phones, and other mobile devices.
