Fuel Starvation

NOTICE

This Bulletin replaces Mercury Outboard Service Bulletin 99-5.

Models Affected

MERCURY/MARINER

1987 and later, 30 thru 250 HP, (with square fuel pump)

FORCE

1994-1-2 and later 40 thru 120 HP, 1997 and later 175 Sport Jet

It is important that fuel supply restrictions/vacuum levels do not exceed specification. High restrictions may result in the engine stalling at low speed, and/or a lean fuel condition at high RPM, that could cause non-warrantable engine damage. It is recommended to check fuel system vacuum on all new boats/engines being prepared for delivery to ensure customer satisfaction and engine durability.

Inspection/Test

The purpose of the following tests is to check the vacuum level required to draw fuel from the fuel tank to the pulse driven fuel pump, check for air leaks in the fuel supply system, and the condition of the pulse driven pump. The following items will be required to perform these tests.

- Short piece of clear hose 1/4" .250 (6.35mm) I.D.
- Vacuum gauge, (digital gauge is preferred) obtain locally
- "TEE" fitting that will fit 1/4" .250 (6.35mm) I.D. fuel hose
- Tubing clamp P/N 91-804062

Make vacuum gauge, "TEE" fitting, and hose connection as shown on page 2.

NOTE: Make the "TEE" fitting connection as close to the fuel pump as possible.

Applied Metallurgy and Corrosion Control Amiya Kumar Lahiri, 2017-08-23 This book serves as a comprehensive resource on metals and materials selection for the petrochemical industrial sector. The petrochemical industry involves large scale investments and to maintain profitability the plants are to be operated with minimum downtime and failure of equipment which can also cause safety hazards. To achieve this objective proper selection of materials, corrosion control and good engineering practices must be followed in both the design and the operation of plants. Engineers and professionals of different disciplines involved in these activities are required to have some basic understanding of metallurgy and corrosion. This book is written with the objective of serving as a one stop shop for these engineering professionals. The book first covers different metallic materials and their properties, metal forming processes, welding and corrosion and corrosion control measures. This is followed by considerations in material selection and corrosion control in three major industrial sectors: oil, gas production, oil refinery and fertilizers. The importance of pressure vessel codes as well as inspection and maintenance repair practices have also been highlighted. The book will be useful for technicians and entry level engineers in these industrial sectors. Additionally, the book may also be used as primary or secondary reading for graduate and professional coursework.

WRC Bulletin Welding Research Council (U.S.), 1999 *Handbook of Engineering Practice of Materials and Corrosion* Jung-Chul (Thomas) Eun, 2020-09-04 This handbook is an in depth guide to the practical aspects of materials and corrosion engineering in the energy and chemical industries. The book covers materials, corrosion, welding, heat treatment, coating, test and inspection and mechanical design and integrity. A central focus is placed on industrial requirements including codes, standards, regulations and specifications that practicing material and corrosion engineers and technicians face in all roles and in all areas of responsibility. The comprehensive resource provides expert guidance on general corrosion mechanisms and recommends materials for the control and prevention of corrosion damage and offers readers industry tested best practices, rationales and case studies.

Based on some of his students most frequently asked questions, Antaki emphasizes the practical applications of this ASME recommended practice. With this book, readers will understand and apply API 579 in their daily work. The material is based on the author's course and presented in clear, concise manner. The book demonstrates how the disciplines of stress analysis, materials engineering and nondestructive inspection interact and apply to fitness for service assessment. These assessment methods apply to pressure vessels, piping and tanks that are in service. This makes it the perfect companion book for Ellenberger's *Pressure Vessels ASME Code Simplified* as well as Ellenberger's *Piping Systems and Pipeline ASME B31 Code Simplified* Reports of
