Hagan Neural Network Solution Manual:

Nonlinear Regression Modeling for Engineering Applications R. Russell Rhinehart, 2016-08-01 Since mathematical models express our understanding of how nature behaves we use them to validate our understanding of the fundamentals about systems which could be processes equipment procedures devices or products Also when validated the model is useful for engineering applications related to diagnosis design and optimization First we postulate a mechanism then derive a model grounded in that mechanistic understanding If the model does not fit the data our understanding of the mechanism was wrong or incomplete Patterns in the residuals can guide model improvement Alternately when the model fits the data our understanding is sufficient and confidently functional for engineering applications This book details methods of nonlinear regression computational algorithms model validation interpretation of residuals and useful experimental design The focus is on practical applications with relevant methods supported by fundamental analysis This book will assist either the academic or industrial practitioner to properly classify the system choose between the various available modeling options and regression objectives design experiments to obtain data capturing critical system behaviors fit the model parameters based on that data and statistically characterize the resulting model The author has used the material in the undergraduate unit operations lab course and in advanced control applications
