Handbook of Nature-Inspired Optimization Algorithms: The State of the Art Ali Wagdy Mohamed, Diego Oliva, Ponnuthurai Nagarathnam Suganthan, 2022-09-03. This book presents recent contributions and significant developments, advanced issues, and challenges in real-world problems and applications. Most of the optimization problems involve different types of constraints. These problems are called constrained optimization problems (COPs). The optimization of the constrained optimization problems is considered a challenging task since the optimum solution(s) must be feasible. In their original design, evolutionary algorithms (EAs) are able to solve unconstrained optimization problems effectively. As a result, in the past decade, many researchers have developed a variety of constraint-handling techniques incorporated into EAs' designs to counter this deficiency. The main objective for this book is to make available a self-contained collection of modern research addressing the general constrained optimization problems in many real-world applications using nature-inspired optimization algorithms. This book is suitable for a graduate class on optimization but will also be useful for interested senior students working on their research projects.
