### **Innovative Design of Low-Power Light-Weight MagnetoRheological Dampers** Mohammad Mehdi

Naserimojarad,2015 MagnetoRheological MR dampers are controllable shock absorption devices that are vastly used in vibration and motion control applications MR dampers can provide an adjustable damping constant that can be used to generate controlled damping force for vibration and shocks control In this research different methods of reducing the weight and power consumption of MR dampers are investigated First optimal design of MR dampers using a Genetic Algorithm is presented Next design of novel magnetic circuits and damper mechanisms for reducing the weight and power consumption is investigated and a new low power low weight mechanism is proposed Experimental results for the proposed MR damper are further presented and compared with the results obtained from a conventional MR damper *Insight into*

*Magnetorheological Shock Absorbers* Janusz Gołdasz,Bogdan Sapiński,2014-12-27 This book deals with magnetorheological fluid theory modeling and applications of automotive magnetorheological dampers On the theoretical side a review of MR fluid compositions and key factors affecting the characteristics of these fluids is followed by a description of existing applications in the area of vibration isolation and flow mode shock absorbers in particular As a majority of existing magnetorheological devices operates in a so called flow mode a critical review is carried out in that regard Specifically the authors highlight common configurations of flow mode magnetorheological shock absorbers or so called MR dampers that have been considered by the automotive industry for controlled chassis applications The authors focus on single tube dampers utilizing a piston assembly with one coil or multiple coils and at least one annular flow channel in the piston
