- Principles:

- Such further processing is performed using one or a combination of several morphological transformations.
- The transformations work in a certain local neighborhood of each pixel (similarly to convolution) defined by so called '*Structuring Element*'. The structuring element can be square, cross-like or any other shape.

Mathematical Morphology and Its Applications to Image and Signal Processing Petros Maragos, Ronald W. Schafer, Muhammad Akmal Butt, 2012-12-06 Mathematical morphology MM is a powerful methodology for the quantitative analysis of geometrical structures It consists of a broad and coherent collection of theoretical concepts nonlinear signal operators and algorithms aiming at extracting from images or other geometrical objects information related to their shape and size Its mathematical origins stem from set theory lattice algebra and integral and stochastic geometry MM was initiated in the late 1960s by G Matheron and J Serra at the Fontainebleau School of Mines in France Originally it was applied to analyzing images from geological or biological specimens However its rich theoretical framework algorithmic efficiency easy implementability on special hardware and suitability for many shape oriented problems have propelled its widespread diffusion and adoption by many academic and industry groups in many countries as one among the dominant image analysis methodologies The purpose of *Mathematical Morphology and its Applications to Image and Signal Processing* is to provide the image analysis community with a sampling from the current developments in the theoretical deterministic and stochastic and computational aspects of MM and its applications to image and signal processing The book consists of the papers presented at the ISMM 96 grouped into the following themes Theory Connectivity Filtering Nonlinear System Related to Morphology Algorithms Architectures Granulometries Texture Segmentation Image Sequence Analysis Learning Document Analysis Applications

[Mathematical Morphology and Its Applications to Image Processing](#) Jean Serra, Pierre Soille, 2012-12-06 Mathematical morphology MM is a theory for the analysis of spatial structures It is called morphology since it aims at analysing the shape and form of objects and it is mathematical in the sense that the analysis is based on set theory topology lattice algebra random functions etc MM is not only a theory but also a powerful image analysis technique The purpose of the present book is to provide the image analysis community with a snapshot of current theoretical and applied developments of MM The book consists of forty five contributions classified by subject It demonstrates a wide range of topics suited to the morphological approach
