Abstract

While it has become widely known that the use of information technology in the workplace is increasing, not all organizations are taking full advantage of the opportunities that this use offers. In the context of the information systems in schools, we would argue that the use of information technology in educational settings is not as widespread as it once was. This paper presents a review of the literature on the use of information technology in educational settings and discusses the challenges that are associated with the use of information technology in educational settings.

Keywords: information technology, management, information systems, business, education, information systems in educational settings
