**Interactive Knowledge Discovery and Data Mining in Biomedical Informatics** Andreas Holzinger,Igor Jurisica,2014-06-17 One of the grand challenges in our digital world are the large complex and often weakly structured data sets and massive amounts of unstructured information This big data challenge is most evident in biomedical informatics the trend towards precision medicine has resulted in an explosion in the amount of generated biomedical data sets Despite the fact that human experts are very good at pattern recognition in dimensions of 3 most of the data is high dimensional which makes manual analysis often impossible and neither the medical doctor nor the biomedical researcher can memorize all these facts A synergistic combination of methodologies and approaches of two fields offer ideal conditions towards unraveling these problems Human Computer Interaction HCI and Knowledge Discovery Data Mining KDD with the goal of supporting human capabilities with machine learning ppThis state of the art survey is an output of the HCI KDD expert network and features 19 carefully selected and reviewed papers related to seven hot and promising research areas Area 1 Data Integration Data Pre processing and Data Mapping Area 2 Data Mining Algorithms Area 3 Graph based Data Mining Area 4 Entropy Based Data Mining Area 5 Topological Data Mining Area 6 Data Visualization and Area 7 Privacy Data Protection Safety and Security

*Library & Information Science Abstracts*, 2005

*Foundations of Data Visualization* Min Chen, Helwig Hauser, Penny Rheingans, Gerik Scheuermann, 2020-08-11

This is the first book that focuses entirely on the fundamental questions in visualization Unlike other existing books in the field it contains discussions that go far beyond individual visual representations and individual visualization algorithms It offers a collection of investigative discourses that probe these questions from different perspectives including concepts that help frame these questions and their potential answers mathematical methods that underpin the scientific reasoning of these questions empirical methods that facilitate the validation and falsification of potential answers and case studies that stimulate hypotheses about potential answers while providing practical evidence for such hypotheses Readers are not instructed to follow a specific theory but their attention is brought to a broad range of schools of thoughts and different ways of investigating fundamental questions As such the book represents the by now most significant collective effort for gathering a large collection of discourses on the foundation of data visualization Data visualization is a relatively young scientific discipline Over the last three decades a large collection of computer supported visualization techniques have been developed and the merits and benefits of using these techniques have been evidenced by numerous applications in practice These technical advancements have given rise to the scientific curiosity about some fundamental questions such as why and how visualization works when it is useful or effective and when it is not what are the primary factors affecting its usefulness and effectiveness and so on This book signifies timely and exciting opportunities to answer such fundamental questions by building on the wealth of knowledge and experience accumulated in developing and deploying visualization technology in practice
