Practical Statistics John Buglear, 2013-11-03 Practical Statistics is an introduction and reference guide for those studying business and management at postgraduate level. MBA students and professionals. It gives the reader a solid understanding of statistics without being too simple or mind numbingly complex. It turns statistics often perceived as being difficult and pointless into something approachable and sensible. John Buglear emphasizes the importance of working back from results rather than working out results. He starts the book with basic concepts that get increasingly more complex from simple diagrams to multivariate methods as well as using simple metaphors to aid understanding. The book has a two level approach with sections headed 'The essentials' and 'Tell me more' to support learning at all levels. A rare book on business statistics that students and professionals can really understand. Practical Statistics supports active learning with use of applications and case studies. Invaluable online learning materials and fully worked solutions to questions in the review section.

Courses and books on basic statistics rarely cover the topic from a data science perspective. The second edition of this popular guide adds comprehensive examples in Python, provides practical guidance on applying statistical methods to data science, tells you how to avoid their misuse and gives you advice on what's important and what's not. Many data science resources incorporate statistical methods but lack a deeper statistical perspective. If you're familiar with the R or Python programming languages and have some exposure to statistics, this quick reference bridges the gap in an accessible, readable format. With this book you'll learn why exploratory data analysis is a key preliminary step in data science. How random sampling can reduce bias and yield a higher quality dataset even with big data. How the principles of experimental design yield definitive answers to questions. How to use regression to estimate outcomes and detect anomalies. Key classification techniques for predicting which category a record belongs to. Statistical machine learning methods that learn from data. Unsupervised learning methods for extracting meaning from unlabeled data.
