Driving 5G Mobile Communications with Artificial Intelligence towards 6G Dragorad A. Milovanovic, Zoran S. Bojkovic, Tulsi Pawan Fowdur, 2023-04-06 Driving 5G Mobile Communications with Artificial Intelligence towards 6G presents current work and directions of continuous innovation and development in multimedia communications with a focus on services and users The fifth generation of mobile wireless networks achieved the first deployment by 2020 completed the first phase of evolution in 2022 and started transition phase of 5G Advanced toward the sixth generation Perhaps one of the

most important innovations brought by 5G is the platform approach to connectivity i.e. a single standard that can adapt to the heterogeneous connectivity requirements of vastly different use cases. 5G networks contain a list of different requirements, standardized technical specifications and a range of implementation options with spectral efficiency, latency and reliability as primary performance metrics. Towards 6G, machine learning (ML) and artificial intelligence (AI) methods have recently proposed new approaches to modeling, designing, optimizing and implementing systems. They are now matured technologies that improve many research fields significantly. The area of wireless multimedia communications has developed immensely, generating a large number of concepts, ideas, technical specifications, mobile standards, patents and articles. Identifying the basic ideas and their complex interconnections becomes increasingly important. The book is divided into three major parts, with each part containing four or five chapters.

Advanced 5G communication: Machine learning based communication and network automation. Artificial Intelligence towards 6G. The first part discusses three main scenarios and standard specification of 5G use cases: eMBB, URLLC, mMTC, vehicular systems beyond 5G and efficient edge architecture on NFV infrastructure. In the second part, different AI/ML based methodologies and open research challenges are presented in introducing 5G AIoT, artificial intelligence of things, scheduling in 5G/6G communication systems, application of DL techniques to modulation detection and channel coding, as well as 5G Open Source tools for experimentations and testing. The third part paved the way to deployment scenarios for different innovative services including technologies and applications of 5G/6G intelligent connectivity, AI assisted eXtended Reality, integrated 5G IoT architecture in next generation Smart Grid, privacy requirements in a hyper connected world and evaluation of representative 6G use cases and technology trends. The book is written by field experts from Europe and Mauritius who introduce a blend of scientific and engineering concepts covering this emerging wireless communication era. It is a very good reference book for telecom professionals, engineers and practitioner in various 5G vertical domains and finally a basis for student courses in 5G/6G wireless systems.

[User-Centric and Information-Centric Networking and Services](#) M. Bala Krishna, 2019-04-29. User Centric Networks (UCN) and Information Centric Networks (ICN) are new communication paradigms to increase the efficiency of content delivery and also content availability. In this new concept, the network infrastructure actively contributes to content caching and distribution. This book presents the basic concepts of UCN and ICN, describes the main architecture proposals for these networks and discusses the main challenges to their development. The book also looks at the current challenges for this concept, including naming, routing and caching on the network core elements, several aspects of content security, user privacy and practical issues in implementing UCN and ICN.

[Applications of Computational Intelligence Techniques in Communications](#) Mridul Gupta, Pawan Kumar Verma, Rajesh Verma, Dharmendra Kr. Upadhyay, 2023-11-03. The book titled Applications of Computational Intelligence Techniques in Communications is a one stop platform for the researchers, academicians and people from industry to get a thorough understanding of the latest research in the field of communication engineering. Over

the past decade a manifold increase in the use of computational intelligence techniques has been identified for obtaining the most optimal and timely solution to a problem The various aspects covering the significant contribution of numerous computational intelligence techniques have been discussed in detail in this book Today s era of machine learning and Internet of Things IoT is demanding as high as possible data rate which has resulted into tremendous increased speed of communication To match up the pace the computational intelligence is posing to be the most efficient and favourite tool The book aims to cover the current technological advancements in the field of communication engineering and give a detailed prospect of computational intelligence to its readers This book will be a great support to the people working in the field of IoT machine learning healthcare optimization filter design 5G and beyond signal processing etc The chapters included here will expose its audience to various newly introduced and advanced computational intelligence techniques applicable in communication domain The readers will be exposed multiple interdisciplinary areas of research in communication and will get the motivation to work in collaboration with other professionals from both the academia and industry
