Parallel and Distributed Processing and Applications Yi Pan, Daoxu Chen, Minyi Guo, Jiannong Cao, Jack Dongarra, 2005-10-19 Welcome to the proceedings of ISPA 2005 which was held in the city of Nanjing. Parallel computing has become a mainstream research area in computer science and the ISPA conference has become one of the premier forums for the presentation of new and exciting research on all aspects of parallel computing. We are pleased to present the proceedings for the 3rd International Symposium on Parallel and Distributed Processing and Applications ISPA 2005 which comprises a collection of excellent technical papers and keynote speeches. The papers accepted cover a wide range of exciting topics including architectures, software, networking and applications. The conference continues to grow and this year a record total of 968 manuscripts including workshop submissions were submitted for consideration by the Program Committee or workshops. From the 645 papers submitted to the main conference the Program Committee selected only 90 long papers and 19 short papers in the program. Eight workshops complemented the outstanding paper sessions.

Distributed Information Systems Harry Katzan, 1979 The notion of a distributed information system has surfaced as a technical concern ameliorated by noteworthy successes in communication networks and minicomputer technology. While the implementation of a distributed system may be regarded as a technical problem, the organizational impact may be substantial, affecting day to day operations as well as managerial philosophy. This book addresses basic concepts and an introduction to the topic followed by technical aspects, communications and dispersion and finishes with managerial aspects and data security. This book is intended for students of business management, data processing, computer science and engineering and for professionals in the same areas.

Building an Effective Security Program for Distributed Energy Resources and Systems Mariana Hentea, 2021-04-06 Building an Effective Security Program for Distributed Energy Resources and Systems. Build a critical and effective security program for DERs. Building an Effective Security Program for Distributed Energy Resources and Systems requires a unified approach to establishing a critical security program for DER systems and Smart Grid applications. The methodology provided integrates systems security engineering principles, techniques, standards and best practices. This publication introduces engineers on the design, implementation and maintenance of a security program for distributed energy resources, DERs, smart grid and industrial

control systems It provides security professionals with understanding the specific requirements of industrial control systems and real time constrained applications for power systems This book Describes the cybersecurity needs for DERs and power grid as critical infrastructure Introduces the information security principles to assess and manage the security and privacy risks of the emerging Smart Grid technologies Outlines the functions of the security program as well as the scope and differences between traditional IT system security requirements and those required for industrial control systems such as SCADA systems Offers a full array of resources cybersecurity concepts frameworks and emerging trends Security Professionals and Engineers can use Building an Effective Security Program for Distributed Energy Resources and Systems as a reliable resource that is dedicated to the essential topic of security for distributed energy resources and power grids They will find standards guidelines and recommendations from standards organizations such as ISO IEC NIST IEEE ENISA ISA ISACA and ISF conveniently included for reference within chapters
