Nonlinear Optimization and Applications Gianni Pillo, F. Giannessi, 2013-11-11 This volume contains the edited texts of the lectures presented at the workshop on Nonlinear Optimization Theory and Applications held in Erice at the G Stampacchia School of Mathematics of the Ettore Majorana International Centre for Scientific Culture June 13-21 1995 The meeting was conceived to review and discuss recent advances and promising research trends concerning theory algorithms and innovative applications in the field This is a field of mathematics which is providing viable of Nonlinear Optimization tools in engineering in economics and in other applied sciences and which is giving a great contribution also in the solution of the more practiced linear optimization problems The meeting was attended by approximately 70 people from 18 countries Besides the lectures several formal and informal discussions took place The result was a broad exposure providing a wide and deep understanding of the present research achievements in the field We wish to express our appreciation for the active contributions of all the participants in the meeting Our gratitude is due to the Ettore Majorana Center in Erice which offered its facilities and stimulating environment its staff was certainly instrumental for the success of the meeting Our gratitude is also due to Francisco Facchinei and Massimo Roma for the time spent in the organization of the workshop and to Giuliana Cai for the careful typesetting of this volume

Introduction to Methods for Nonlinear Optimization Luigi Grippo, Marco Sciandrone, 2023-05-27 This book has two main objectives to provide a concise introduction to nonlinear optimization methods which can be used as a textbook at a graduate or upper undergraduate level to collect and organize selected important topics on optimization algorithms not easily found in textbooks which can provide material for advanced courses or can serve as a reference text for self study and research The basic material on unconstrained and constrained optimization is organized into two blocks of chapters basic theory and optimality conditions unconstrained and constrained algorithms These topics are treated in short chapters that contain the most important results in theory and algorithms in a way that in the authors experience is suitable for introductory courses A third block of chapters addresses methods that are of increasing interest for solving difficult optimization problems Difficulty can be typically due to the high nonlinearity of the objective function ill conditioning of the Hessian matrix lack of information on first order derivatives the need to solve large scale problems In the book various key subjects are addressed including exact penalty functions and exact augmented Lagrangian functions non monotone methods decomposition algorithms derivative free methods for nonlinear equations and optimization problems The appendices at the end of the book offer a review of the essential mathematical background including an introduction to convex analysis that can make part of an introductory course
