Thomas H. Cormen,2013-03-01 For anyone who has ever wondered how computers solve problems an engagingly written guide for nonexperts to the basics of computer algorithms Have you ever wondered how your GPS can find the fastest way to your destination selecting one route from seemingly countless possibilities in mere seconds How your credit card account number is protected when you make a purchase over the Internet The answer is algorithms And how do these mathematical formulations translate themselves into your GPS your laptop or your smart phone This book offers an engagingly written guide to the basics of computer algorithms In *Algorithms Unlocked* Thomas Cormen coauthor of the leading college textbook on the subject provides a general explanation with limited mathematics of how algorithms enable computers to solve problems Readers will learn what computer algorithms are how to describe them and how to evaluate them They will discover simple ways to search for information in a computer methods for rearranging information in a computer into a prescribed order sorting how to solve basic problems that can be modeled in a computer with a mathematical structure called a graph useful for modeling road networks dependencies among tasks and financial relationships how to solve

problems that ask questions about strings of characters such as DNA structures the basic principles behind cryptography fundamentals of data compression and even that there are some problems that no one has figured out how to solve on a computer in a reasonable amount of time *Dr. Dobbs's Journal*, 2006 [Proceedings of the Twenty-Second Annual ACM Symposium on Principles of Distributed Computing](#), 2003 This paper presents an efficient asynchronous protocol to compute RSA inverses with respect to a public RSA modulus N whose factorization is secret and shared among a group of parties Given two numbers x and e the protocol computes y such that $ye \equiv x \pmod{N}$ A synchronous protocol for this task has been presented by Catalano Gennaro and Halevi Eurocrypt 2000 but the standard approach for turning this into an asynchronous protocol would require a Byzantine agreement sub protocol Our protocol adopts their approach but exploits a feature of the problem in order to avoid the use of a Byzantine agreement primitive Hence it leads to efficient asynchronous protocols for threshold signatures and for Byzantine agreement based on the strong RSA assumption without the use of random oracles
