Essentials of College Algebra with Modeling and Visualization Gary K. Rockswold, 2008 Today s algebra students want to know the why behind what they are learning and it is this that motivates them to succeed in the course By focusing on algebra in a real world context Gary Rockswold gracefully and succinctly answers this need As

many topics taught in today's college algebra course aren't as crucial to students as they once were. Gary has developed this streamlined text covering linear, quadratic, nonlinear, exponential, and logarithmic functions and systems of equations and inequalities to get to the heart of what students need from this course. By answering the why and streamlining the how, Rockswold has created a text to serve today's students and help them to truly succeed.

Books a la Carte are unbound, three-hole punch versions of the textbook. This lower cost option is easy to transport and comes with same access code or media that would be packaged with the bound book. By connecting applications, modeling, and visualization, Gary Rockswold motivates students to learn mathematics in the context of their experiences. In order to both learn and retain the material, students must see a connection between the concepts and their real lives. In this new edition, connections are taken to a new level with See the Concept features where students make important connections through detailed visualizations that deepen understanding. Rockswold is also known for presenting the concept of a function as a unifying theme with an emphasis on the rule of four: verbal, graphical, numerical, and symbolic representations. A flexible approach allows instructors to strike their own balance of skills: rule of four, applications, modeling, and technology.
