Principles Of Conservation Biology 2nd Edition:

An Introduction to Conservation Biology Anna Sher, Richard B. Primack, 2020 *An Introduction to Conservation Biology* Anna Sher, Richard B. Primack, 2020 **Ecological Explosions** Daniel Simberloff, 2026-01-16 A leading biologist offers a comprehensive and accessible history of invasive species science from its earliest antecedents through its current research foci and controversies From the arrival of the naval shipworm in the Black Sea in the first millennium BC to the escape of the Burmese python in Florida in 1992 humans have moved species to new locations deliberately or inadvertently for thousands of years Agricultural and environmental impacts of some invasions were evident early although whether observers recognized that the cause was an introduced species is uncertain The history of invasion biology truly begins in the sixteenth through eighteenth centuries when explorers noticed European species on various distant islands and in North America In the nineteenth century biogeographers studying species distributions across the globe introduced the first native and non native species categorizations and prominent researchers like Charles Darwin began to describe the impacts of introduced species In the nineteenth and twentieth centuries as humans moved increasing numbers of species across the globe the advent of modern ecology deepened our understanding of the scope of the problem In *Ecological Explosions* invasive species expert Daniel Simberloff provides a thorough overview of the development of invasion science from early research including from the perspectives of leading scientists like Aldo Leopold to the field's future Simberloff explores the work of pioneering ecologists like Charles Elton antecedents of what became today's invasion biology before discussing the field's true emergence in the 1980s its explosive methodological and theoretical expansion its integration with other disciplines and its increasing visibility not only within the biological literature but also in government policies across the world in the 1990s Finally he investigates current controversies such as the debate over whether the entire science is xenophobic and asks how ecosystems might adapt to a rapidly globalizing world and ever increasing numbers of introduced species including the joro spider lionfish spotted lanternfly common reed and Asian carp

Ecology and Design Bart Johnson, Kristina Hill, 2013-04-09 Professionals faculty and students are aware of the pressing need to integrate ecological principles into environmental design and planning education but few materials exist to facilitate that development *Ecology and Design* addresses that shortcoming by articulating priorities and approaches for incorporating ecological principles in the teaching of landscape design and planning The book explains why landscape architecture and design and planning faculty should include ecology as a standard part of their courses and curricula provides insights on how that can be done and offers models from successful programs The book examines the need for change in the education and practice of landscape architecture and in the physical planning and design professions as a whole asks what designers and physical planners need to know about ecology and what applied ecologists can learn from design and planning develops conceptual frameworks needed to realize an ecologically based approach to design and planning offers recommendations for the integration of ecology within a landscape architecture curriculum as an example for other design fields such as civil engineering and architecture considers the implications for professional practice explores innovative approaches to collaboration among designers and ecologists In addition to the editors contributors include Carolyn Adams Jack Ahern Richard T T Forman Michael Hough James Karr Joan Iverson Nassauer David Orr Kathy Poole H Ronald Pulliam Anne Whiston Spirn Sandra Steingraber Carl Steinitz Ken Tamminga and William Wenk *Ecology and Design* represents an important guidepost and source of ideas for faculty students and professionals in landscape architecture urban design planning and architecture landscape ecology conservation biology and restoration ecology civil and environmental engineering and related fields *Elements of Ecology* Thomas Michael Smith, Robert Leo Smith, 2006 KEY BENEFIT
