**Abstract** - This paper explores the research field of chatbots, covering historical evolution, types, technological advancements, and how it has impacted digital marketing. It also introduces a new pioneering architecture designed to enhance chatbot findings. It considers the construction of a conversational companion and the underlying infrastructure to ensure a robust user experience. This architecture aims to set the stage for future research where boundaries of the existent task-oriented chatbots are pushed. The paper also pays special attention to many challenges and limitations in this domain, such as dialectal Arabic, focusing on the complexities of Maghrebi dialects. It also examines security concerns, data privacy, and the ongoing pursuit of innovation in chatbot development.

**Keywords** - Chatbot, Digital marketing, User experience, Natural language processing, Machine Learning.

## 1. Introduction

The digital age has revolutionized communication and engagement. Technology and automation have become key players in shaping how individuals and organizations engage with each other. At the lead of this evolution stand chatbots, AI entities created to engage in conversations with customers to provide helpful information and autonomously execute tasks. Chatbots have quickly gained popularity in e-commerce and revolutionized customer support by transforming interactions with technology and services. Chatbots' origins can be traced back to Alan Turing's visionary concept of machines, which proposed that machines could mimic human conversation. This idea paved the way for research and progress in the field of AI and marked the first emergence of chatbots such as ELIZA and PARRY. These early prototypes have laid a foundation for the development of chatbots and inspired countless innovators to enhance and expand their capabilities over time. Since then, diverse ecosystems have emerged, including rule-based chatbots that use defined scripts and decision trees. Then, AI-powered chatbots that leverage Machine Learning and NLP algorithms to understand context and learn from user interactions. More than just a chat interface, chatbots are intelligent digital entities that interact conversationally and seamlessly integrate into the customer journey. Although chatbots have demonstrated their capabilities in numerous languages, linguistic diversity is still challenging, especially in dialectal Arabic. In particular, Maghrebi dialects pose a real challenge for chatbot developers, as they include variations in vocabulary or sentence structure and the nuance of context embedded in the language. A novel architecture is crafted to adapt and thrive in

dialectal Arabic to face these difficulties. A chatbot architecture is crucial for the conversational bot's clear and fruitful development and operation as it provides it with the foundational blueprint. The main goal is to guarantee the maintainability and scalability of the chatbot. Other than that, developing a well-defined architecture allows the creators to handle all the aspects of user interactions they aim to work on clearly and in a structured manner. Bots' significant role in customer interactions across industries means having a solid architectural foundation is imperative. It should ensure consistent performance, adaptability to evolving requirements, and the ability to achieve desired business outcomes. This paper is part of a series of studies that were conducted on the subject of predictive analysis and user profiling. It is structured as follows: the first section details the chatbot field history from the Turing test to the Generative Chatbots; the second section outlines the types of chatbots by category, and then the technological advancements are detailed. The following section outlines the advancements in the chatbot field for digital marketing. Afterwards, the paper presents a novel architecture for the continuity of this work. A typical case study was detailed, followed by an analysis of challenges and limitations before the conclusion.

## 2. Chatbot History

One of the early concepts of chatbots was in 1950. Alan Turing proposed the Turing Test [1], which explores whether a machine can display intelligence similar to a human. The test involves a text-based conversation where a human judge interacts with two participants: one human and one machine. If the machine can imitate responses convincingly, the judges
