The Origin of Species by Means of Natural Selection Charles Darwin,2008-12-09 Classic from the year 2008 in the subject English Language and Literature Studies Literature language English abstract I will here give a brief sketch of the progress of opinion on the Origin of Species Until recently the great majority of naturalists believed that species were immutable productions and had been separately created This view has been ably maintained by many authors Some few naturalists on the other hand have believed that species undergo modification and that the existing forms of life are the descendants by true generation of pre existing forms

Passing over allusions to the subject in the classical writers Aristotle in his *Physicæ Auscultationes* lib 2 cap 8 s 2 after remarking that rain does not fall in order to make the corn grow any more than it falls to spoil the farmer's corn when threshed out of doors applies the same argument to organisation and adds as translated by Mr Clair Grece who first pointed out the passage to me So what hinders the different parts of the body from having this merely accidental relation in nature as the teeth for example grow by necessity the front ones sharp adapted for dividing and the grinders flat and serviceable for masticating the food since they were not made for the sake of this but it was the result of accident And in like manner as to other parts in which there appears to exist an adaptation to an end Wheresoever therefore all things together that is all the parts of one whole happened like as if they were made for the sake of something these were preserved having been appropriately constituted by an internal spontaneity and whatsoever things were not thus constituted perished and still perish We here see the principle of natural selection shadowed forth but how little Aristotle fully comprehended the principle is shown by his remarks on the formation of the teeth the first author who in modern times has treated it in a scientific spirit was Buffon But as his opinions fluctuated greatly at different periods and as he does not enter on the causes or means of the transformation of species I need not here enter on details

Thinking about Evolution Rama S. Singh,2001 Originally published in 2001 this is the second of two volumes published by Cambridge University Press in honour of Richard Lewontin This second volume of essays honours the philosophical historical and political dimensions of his work It is fitting that the volume covers such a wide range of perspectives on modern biology given the range of Lewontin's own contributions He is not just a very successful practitioner of evolutionary genetics but a rigorous critic of the practices of genetics and evolutionary biology and an articulate analyst of the social political and economic contexts and consequences of

genetic and evolutionary research The volume begins with an essay by Lewontin on Natural History and Formalism in Evolutionary Genetics and includes contributions by former students post docs colleagues and collaborators which cover issues ranging from the history and conceptual foundations of evolutionary biology and genetics to the implications of human genetic diversity
