Charity Mupanga the resilient and maternal proprietor of Harrods International Bar and Nightspot faces her toughest challenge in Dizzy Worms the final novel in Michael Holman s acclaimed trilogy set in the African slum of Kireba Faced with a Health and Safety closure Charity has a week to appeal and the chances of success seem negligible elections are imminent and Kireba is due to become a showcase of President Josiah Nduka s slum rehabilitation program backed by gullible foreign donors But before taking on Nduka and the council she has a promise to keep to provide a supply of her famous sweet doughballs to a small army of street children as voracious as they are malodorous Michael Holman uses his witty satirical pen to brilliant effect in this affectionate portrait of a troubled region targeting local politicians western diplomats foreign donors and journalists puncturing pretensions and questioning the philosophy of aid

Geospatial Algebraic Computations Joseph Awange,Béla Paláncz,2016-01-29 Improved geospatial instrumentation and technology such as in laser scanning has now resulted in millions of data being collected e g point clouds It is in realization that such huge amount of data requires efficient and robust mathematical solutions that this third edition of the book extends the second edition by introducing three new chapters Robust parameter estimation Multiobjective optimization and Symbolic regression Furthermore the linear homotopy chapter is expanded to include nonlinear homotopy These disciplines are discussed first in the theoretical part of the book before illustrating their geospatial applications in the applications chapters where numerous numerical examples are presented The renewed electronic supplement contains these new theoretical and practical topics with the corresponding Mathematica statements and functions supporting their computations introduced and applied This third edition is renamed in light of these technological advancements

Algebraic Geodesy and Geoinformatics Joseph L. Awange,Erik W. Grafarend,Béla Paláncz,Piroska Zaletnyik,2010-05-27 While preparing and teaching Introduction to Geodesy I and II to undergraduate students at Stuttgart

University we noticed a gap which motivated the writing of the present book Almost every topic that we taught required some skills in algebra and in particular computer algebra From positioning to transformation problems inherent in geodesy and geoinformatics knowledge of algebra and application of computer algebra software were required In preparing this book therefore we have attempted to put together basic concepts of abstract algebra which underpin the techniques for solving algebraic problems Algebraic computational algorithms useful for solving problems which require exact solutions to nonlinear systems of equations are presented and tested on various problems Though the present book focuses mainly on the two elds the concepts and techniques presented herein are nonetheless applicable to other elds where algebraic computational problems might be encountered In Engineering for example network densi cation and robotics apply resection and intersection techniques which require algebraic solutions Solution of nonlinear systems of equations is an indispensable task in almost all geosciences such as geodesy geoinformatics geophysics just to mention but a few as well as robotics These equations which require exact solutions underpin the operations of ranging resection intersection and other techniques that are normally used Examples of problems that require exact solutions include three dimensional resection problem for determining positions and orientation of sensors e g camera theodolites robots scanners etc
