**Numerical Solution of Partial Differential Equations** Gordon D. Smith, 1985 Substantially revised this authoritative study covers the standard finite difference methods of parabolic hyperbolic and elliptic equations and includes the concomitant theoretical work on consistency stability and convergence The new edition includes revised and greatly expanded sections on stability based on the Lax Richtmeyer definition the application of Pade approximants to systems of ordinary differential equations for parabolic and hyperbolic equations and a considerably improved presentation of iterative methods A fast paced introduction to numerical methods this will be a useful volume for students of mathematics and engineering and for postgraduates and professionals who need a clear concise grounding in this discipline Numerical Solution of Partial Differential Equations Gordon D. D. Smith, 1971 **Numerical Solution of Partial Differential Equations** George David Smith, Gordon D. Smith, 1965 Solute Movement in the Rhizosphere Philip Bernard Tinker, Peter Hague Nye, 2000 This is a completely revised edition of the previously titled Solute Movement in the Soil Root System It describes in detail how plant nutrients and other solutes move in the soil in response to plant uptake and it provides a basis for understanding processes in the root zone so that they can be modeled realistically in order to predict the effects of variations in natural conditions or our own practices Computational Neuroscience Erik De Schutter, 2000-11-22 Designed primarily as an introduction to realistic modeling methods Computational Neuroscience Realistic Modeling for Experimentalists focuses on methodological approaches selecting appropriate methods and identifying potential pitfalls The author addresses varying levels of complexity from molecular interactions within single neurons to the

processing of information by neural networks He avoids theoretical mathematics and provides just enough of the basic math used by experimentalists What makes this resource unique is the inclusion of downloadable resources that furnish interactive modeling examples It contains tutorials and demos movies and images and the simulation scripts necessary to run the full simulation described in the chapter examples Each chapter covers the theoretical foundation parameters needed appropriate software descriptions evaluation of the model future directions expected examples in text boxes linked to the downloadable resources and references The first book to bring you cutting edge developments in neuronal modeling It provides an introduction to realistic modeling methods at levels of complexity varying from molecular interactions to neural networks The book and downloadable resources combine to make Computational Neuroscience Realistic Modeling for Experimentalists the complete package for understanding modeling techniques
