Proceedings of the 13th International Conference on Ubiquitous Information Management and Communication (IMCOM) 2019 Sukhan Lee, Roslan Ismail, Hyunseung Choo, 2019-05-22 Over past few years technologies have experienced boundaries getting blurred and concept of convergence to gain prominence Harnessing from this two main tracks for information processing management and communication are held covering both research and application works of information management intelligent information processing interaction management networking telecommunications and social interaction This book creates unique opportunity for research convergence among truly diverse technology domains of computer science Leveraging from this diversity of topics researchers get to generate novel research ideas by seeking application of their research in a different technology domain This volume represents the collection of papers presented at the 13th International Conference on Ubiquitous Information Management and Communication IMCOM 2019 held on 4-6 January 2019 in Phuket Thailand Out of 228 papers submitted from all around the world 88 papers were accepted for presentations The 88 contributions to this volume are organized into 5 chapters Chapter 1 Network Evolution Chapter 2 Intelligent and Secure Network Chapter 3 Image and Video Processing Chapter 4 Information Technology and Society and Chapter 5 Data Mining and Learning Our editors wish readers to find this volume informative and enjoyable

System Programming in Linux Stewart Weiss, 2025-10-14 Learn to write real Linux software not just run it Most programmers never learn how Linux really works Why Because system programming is rarely

taught and the tools can be intimidating without the right guidance As a result many developers stick to high level languages and frameworks writing code that runs on Linux without understanding how it interacts with Linux In today s world that s not enough to stand out Especially as more companies turn to AI to write their software the question becomes How do you stay relevant in an AI driven world You learn how things really work If you ve ever wondered how processes are created how memory and files are managed or how programs communicate in a Unix environment *System Programming in Linux* will make it all make sense This is a hands on guide to writing software that interfaces directly with the Linux operating system You ll go beyond shell commands and abstractions to understand what the kernel is doing and how to leverage it through your own code Rather than telling you how to solve each problem Professor Stewart N Weiss guides you through the process of discovering the solution yourself Start with the core concepts of Unix and Linux then work your way up to advanced topics like process control signals interprocess communication threading and non blocking I O Each chapter includes conceptual diagrams annotated source code and practical projects to help you immediately apply what you ve learned You ll explore topics such as The structure of Unix and Linux operating systems and why it matters Using system calls to create and manage processes The mechanics of signals timers and interprocess communication Using synchronization tools to write multithreaded programs Interacting with filesystems devices and terminals Building text based user interfaces using ncurses Developing programs that are robust efficient and portable At Hunter College Professor Weiss built the course this book is based on and he has helped thousands of students go from confusion to confidence in his over 40 years of teaching programming His clear conversational style technical depth and focus on real world application make this one of the most approachable and powerful system programming books available As Linux continues to dominate development server and embedded environments understanding the system behind your software isn t just helpful it s essential Whether you re a student developer or sysadmin this book gives you the tools to work directly with Linux and the insight to understand what s really happening under the hood

Rupatai V. Lichode, Miss. Radhika Prakash Karad, Dr. Ghanshyam S Nikhade ,2026-01-20 *Computer Science Foundations Quiz Book* S.R. Subramanya, This book is a self assessment book quiz book It has a vast collection of over 2 500 questions along with answers The questions have a wide range of difficulty levels They have been designed to test a good understanding of the fundamental aspects of the major core areas of Computer Science The topical coverage includes data representation digital design computer organization software operating systems data structures algorithms programming languages and compilers automata languages and computation database systems computer networks and computer security

Distributed Real-Time Systems K. Erciyes, 2019-07-23 This classroom tested textbook describes the design and implementation of software for distributed real time systems using a bottom up approach The text addresses common challenges faced in software projects involving real time systems and presents a novel method for simply and effectively

performing all of the software engineering steps Each chapter opens with a discussion of the core concepts together with a review of the relevant methods and available software This is then followed with a description of the implementation of the concepts in a sample kernel complete with executable code Topics and features introduces the fundamentals of real time systems including real time architecture and distributed real time systems presents a focus on the real time operating system covering the concepts of task memory and input output management provides a detailed step by step construction of a real time operating system kernel which is then used to test various higher level implementations describes periodic and aperiodic scheduling resource management and distributed scheduling reviews the process of application design from high level design methods to low level details of design and implementation surveys real time programming languages and fault tolerance techniques includes end of chapter review questions extensive C code numerous examples and a case study implementing the methods in real world applications supplies additional material at an associated website Requiring only a basic background in computer architecture and operating systems this practically oriented work is an invaluable study aid for senior undergraduate and graduate level students of electrical and computer engineering and computer science The text will also serve as a useful general reference for researchers interested in real time systems

Storage Systems Alexander Thomasian, 2021-10-13 Storage Systems Organization Performance Coding Reliability and Their Data Processing was motivated by the 1988 Redundant Array of Inexpensive Independent Disks proposal to replace large form factor mainframe disks with an array of commodity disks Disk loads are balanced by striping data into strips with one strip per disk and storage reliability is enhanced via replication or erasure coding which at best dedicates k strips per stripe to tolerate k disk failures Flash memories have resulted in a paradigm shift with Solid State Drives SSDs replacing Hard Disk Drives HDDs for high performance applications RAID and Flash have resulted in the emergence of new storage companies namely EMC NetApp SanDisk and Purestorage and a multibillion dollar storage market Key new conferences and publications are reviewed in this book The goal of the book is to expose students researchers and IT professionals to the more important developments in storage systems while covering the evolution of storage technologies traditional and novel databases and novel sources of data We describe several prototypes FAWN at CMU RAMCloud at Stanford and Lightstore at MIT Oracle s Exadata AWS Aurora Alibaba s PolarDB Fungible Data Center and author s paper designs for cloud storage namely heterogeneous disk arrays and hierarchical RAID Surveys storage technologies and lists sources of data measurements text audio images and video Familiarizes with paradigms to improve performance caching prefetching log structured file systems and merge trees LSMs Describes RAID organizations and analyzes their performance and reliability Conserves storage via data compression deduplication compaction and secures data via encryption Specifies implications of storage technologies on performance and power consumption Exemplifies database parallelism for big data analytics deep learning via multicore CPUs GPUs FPGAs and ASICs e.g. Google s Tensor Processing Units
