Vehicular Engine Design Kevin Hoag,Brian Dondlinger,2015-08-04 This book provides an introduction to the design and mechanical development of reciprocating piston engines for vehicular applications Beginning from the determination of required displacement and performance coverage moves into engine configuration and architecture Critical layout dimensions and design trade offs are then presented for pistons crankshafts engine blocks camshafts valves and manifolds Coverage continues with material strength and casting process selection for the cylinder block and cylinder heads Each major engine component and sub system is then taken up in turn from lubrication system to cooling system to intake and exhaust systems to NVH For this second edition latest findings and design practices are included with the addition of over sixty new pictures and many new equations

**How to Build Max-Performance Chevy LT1/LT4 Engines** Myron Cottrell,Eric McClellan,2012 GM s LT1 LT4 engines represented the highest level of small block V 8 develop ment for the period between the legendary small block Chevrolet and the introduction of the LS series V 8 They powered all of the hottest production vehicles of the 1990s including the Corvette Camaro Firebird and Caprice Impala SS These enhanced small blocks were reliable and strong and can be built to impressive performance levels on a relatively small budget with the right upgrades This book guides you through the factory and aftermarket components of the LT1 LT4 engines offering sound performance advice and recommendations Additionally complete engine buildup recipes are provided along with their respective horsepower and torque levels You can follow the advice of experts and achieve targeted results for your own project

*Externally Heated Valve Engine* Zbyszko Kazimierski,Jerzy Wojewoda,2015-12-22 This book reports on a novel approach for generating mechanical energy from different external heat sources using the body of a typical piston engine with valves By presenting simple yet effective numerical models the authors show how this new approach which combines existing internal combustion technology with a lubrication system is able to offer an economic solution to the problem of mechanical energy generation in piston engines Their results also show that a stable heat generation process can

be guaranteed outside of the engine The book offers a detailed report on physical and numerical models of 4 stroke and 2 stroke versions of the EHVE together with different models of heat exchange valves and results of their simulations It also delivers the test results of an engine prototype run in laboratory conditions By presenting a novel theoretical framework and providing readers with extensive knowledge of both the advantages and challenges of the method this book is expected to inspire academic researchers advanced PhD students and professionals in their search for more effective solutions to the problem of renewable energy generation
