Seven Mobile Apps in Seven Weeks Tony Hillerson, 2016-08-01 Answer the question Can we build this for ALL the devices with a resounding YES Learn how to build apps using seven different platforms Mobile Web iOS Android Windows RubyMotion React Native and Xamarin Find out which cross platform solution makes the most sense for your needs whether you re new to mobile or an experienced developer expanding your options Start covering all of the mobile world today Understanding the idioms patterns and quirks of the modern mobile platforms gives you the power to choose how you develop Over seven weeks you ll build seven different mobile apps using seven different tools You ll start out with Mobile Web develop native apps on iOS Android and Windows and finish by building apps for multiple operating systems using the native cross platform solutions RubyMotion React Native and Xamarin For each platform you ll build simple but non trivial apps that consume JSON data run on multiple screen sizes or store local data You ll see how to test how to build views and how to structure code You ll find out how much code it s possible to share how much of the underlying platform you still need to know and ultimately you ll get a firm understanding of how to build apps on whichever devices your users prefer This book gives you enough first hand experience to weigh the trade offs when building mobile apps You ll compare writing apps on one platform versus another and understand the

benefits and hidden costs of cross platform tools You ll get pragmatic hands on experience writing apps in a multi platform world What You Need You ll need a computer and some experience programming When we cover iOS you ll need a Mac and when we cover Windows Phone you ll need a computer with Windows on it It s helpful if you have access to an iPhone Android phone and Windows Phone to run the examples on the devices where mobile apps are ultimately deployed but the simulators or emulator versions of those phones work great
