Numerical Linear Algebra Lloyd N. Trefethen, David Bau, III, 1997-06-01 *Numerical Linear Algebra* is a concise insightful and elegant introduction to the field of numerical linear algebra

[Numerical Methods for Large Eigenvalue Problems](#) Yousef Saad, 2011-01-01 This revised edition discusses numerical methods for computing eigenvalues and eigenvectors of large sparse matrices It provides an in depth view of the numerical methods that are applicable for solving matrix eigenvalue problems that arise in various engineering and scientific applications Each chapter was updated by shortening or deleting outdated topics adding topics of more recent interest and adapting the Notes and References section Significant changes have been made to Chapters 6 through 8 which describe algorithms and their implementations and now include topics such as the implicit restart techniques the Jacobi Davidson method and automatic multilevel substructuring

[Matrix Computations](#) Gene Howard Golub, Charles F. Van Loan, 2013-02-15 This revised edition provides the mathematical background and algorithmic skills required for the production of numerical software It includes rewritten and clarified proofs and derivations as well as new topics such as Arnoldi iteration and domain decomposition methods

[Scientific Computing](#) Michael T. Heath, 2018-11-14 This book differs from traditional numerical analysis texts in that it focuses on the motivation and ideas behind the algorithms presented rather than on detailed analyses of them It presents a broad overview of methods and software for solving mathematical problems arising in computational modeling and data analysis including proper problem formulation selection of effective solution algorithms and interpretation of results In the 20 years since its original publication the modern fundamental perspective of this book has aged well and it continues to be used in the classroom This Classics edition has been updated to include pointers to Python software and the Chebfun package expansions on barycentric formulation for Lagrange polynomial interpretation and stochastic methods and the availability of about 100 interactive educational modules that dynamically illustrate the concepts and algorithms in the book *Scientific Computing An Introductory Survey* Second Edition is intended as both a textbook and a reference for computationally oriented disciplines that need to solve mathematical problems

Engineering Design Optimization Joaquim R. R. A. Martins, Andrew Ning, 2021-11-18 A rigorous yet accessible graduate textbook covering both fundamental and advanced optimization theory and algorithms

Fast Direct Solvers for Elliptic PDEs Per-Gunnar Martinsson, 2019-12-16 Fast solvers for elliptic PDEs form a pillar of scientific computing They enable detailed and accurate simulations of electromagnetic fields fluid flows biochemical processes and much more This textbook provides an introduction to fast solvers from the point of view of integral equation formulations which lead to unparalleled accuracy and speed in many applications The focus is on fast algorithms for handling dense matrices that arise in the discretization of integral operators such as the fast multipole method and fast direct solvers While the emphasis is on techniques for dense matrices the text also describes how similar techniques give rise to linear complexity algorithms for computing the inverse or the LU factorization of a sparse matrix resulting from

the direct discretization of an elliptic PDE This is the first textbook to detail the active field of fast direct solvers introducing readers to modern linear algebraic techniques for accelerating computations such as randomized algorithms interpolative decompositions and data sparse hierarchical matrix representations Written with an emphasis on mathematical intuition rather than theoretical details it is richly illustrated and provides pseudocode for all key techniques Fast Direct Solvers for Elliptic PDEs is appropriate for graduate students in applied mathematics and scientific computing engineers and scientists looking for an accessible introduction to integral equation methods and fast solvers and researchers in computational mathematics who want to quickly catch up on recent advances in randomized algorithms and techniques for working with data sparse matrices
