Reference in Discourse A. A. Kibrik, 2011-09 This is the first full study of how people refer to entities in natural discourse It contributes to the understanding of both linguistic diversity and the cognitive underpinnings of language and it provides a framework for further research in both fields Andrej Kibrik focuses on the way specific entities are mentioned in natural discourse during which about every third word usually depends on referential choice He considers reference as an overt representation of underlying cognitive processes and combines a theoretically oriented cognitive approach with empirically based cross linguistic analysis He begins by introducing the cognitive approach to discourse analysis and by examining the relationship between discourse studies and linguistic typology He discusses reference as a linguistic phenomenon in connection with the traditional notions of deixis anaphora givenness and topicality and describes the way his theoretical approach is centered on notions of referent activation in working memory He argues that the speaker is responsible for the shape of discourse and that referential expressions should be understood as choices made by speakers rather than as puzzles to be solved by addressees Kibrik examines the cross linguistic aspects of reference and the typology of referential devices including referring expressions per se such as free and bound pronouns and referential aids that help to tell apart the concurrently activated entities This discussion is based on the data from about 200 languages from around the world He then proposes a comprehensive model of referential choice in which he draws on concepts from cognitive linguistics psycholinguistics cognitive psychology and cognitive neuroscience and applies this to Russian and English He also draws together his empirical analyses in order to examine what light his analysis of discourse can shed on the way information is processed in working memory In the final part of the book Andrej Kibrik offers a wider perspective including deixis referential aspects of gesticulation and signed languages This pioneering work will interest linguists and cognitive scientists interested in discourse reference typology and the operations of working memory in linguistic communication Systems, Decision and Control in Energy V Artur Zaporozhets, 2023-08-08 The book consists of 8 parts Energy Informatics Electric Power Engineering Heat Power Engineering Nuclear Power Engineering Renewable Power Engineering Fuels Transport and Environmental Safety The results presented in this book are aimed at solving some of the technical issues proposed by the Ukraine Recovery Plan and other important scientific and applied problems in the field of energy Scientists from leading Ukrainian academic institutions and universities are working on this book This book is for scientists researchers engineers as well as lecturers and postgraduates of higher education institutions dealing with energy sector power systems ecological safety etc *Advances in Robotics, Automation and Control* Jesús Arámburo-Lizárraga, Antonio Ramírez-Treviño, 2008-10-01 The book presents an excellent overview of the recent developments in the different areas of Robotics Automation and Control Through its 24 chapters this book presents topics related to control and robot design it also introduces new mathematical tools and techniques devoted to improve the system modeling and control An important point is the use of
