The Calculus Collection Caren L. Diefenderfer, Roger B. Nelsen, 2010-12-31 The Calculus Collection is a useful resource for everyone who teaches calculus in high school or in a 2 or 4 year college or university It consists of 123 articles selected by a panel of six veteran high school teachers each of which was originally published in Math Horizons MAA Focus The American Mathematical Monthly The College Mathematics Journal or Mathematics Magazine The articles focus on engaging students who are meeting the core ideas of calculus for the first time The Calculus Collection is filled with insights alternate explanations of difficult ideas and suggestions for how to take a standard problem and open it up to the rich mathematical explorations available when you encourage students to dig a little deeper Some of the articles reflect an enthusiasm for bringing calculators and computers into the classroom while others consciously address themes from the calculus reform movement But most of the articles are simply interesting and timeless explorations of the mathematics encountered in a first course in calculus

C++ and Object-Oriented Numeric Computing for Scientists and Engineers Daoqi Yang, 2011-06-28 This book is intended to be an easy concise but rather complete introduction to the ISO ANSI C programming language with special emphasis on object oriented numeric computation for students and professionals in science and engineering The description of the language is platform independent Thus it applies to different operating systems such as UNIX Linux MacOS Windows and DOS as long as a standard C compiler is equipped The prerequisite of this book is elementary knowledge of calculus and linear algebra However this prerequisite is hardly necessary if this book is going to be used as a textbook for teaching C and all the sections on numeric methods are skipped Programming experience in an other language such as FORTRAN C Ada Pascal Maple or Matlab will certainly help but is not presumed All C features are introduced in an easy way through concepts such as functions complex numbers vectors matrices and integrals which are familiar to every student and professional in science and engineering In the final chapter advanced features that are not found in FORTRAN C Ada or Matlab are illustrated in the context of iterative algorithms for linear systems such as the preconditioned conjugate gradient CG method

and generalized minimum residual GMRES method Knowledge of CG GMRES and preconditioning techniques is not presumed and they are explained in detail at the algorithmic level
