**The Geek Manifesto** Mark Henderson, 2012-05-10. Whether we want to improve education or cut crime to enhance public health or to generate clean energy, we need the experimental methods of science: the best tool humanity has yet developed for working out what works. Yet from the way we're governed to the news we're fed by the media, we're let down by a lack of understanding and respect for its insights and evidence. In *The Geek Manifesto*, Mark Henderson explains why and how we need to entrench scientific thinking more deeply into every aspect of our society. A new movement is gathering. Let's turn it into a force our leaders cannot ignore. This edition includes an appendix **A Geek Manifesto for America** by David Dobbs.

**Groundbreaking Scientific Experiments, Inventions, and Discoveries of the 18th Century** Jonathan Shectman, 2003-09-30. The 18th century saw the emergence of the industrial and chemical revolutions and witnessed the near-universal acceptance of applied science. It was a time of revolutionary, lasting transformation for the practice of science and mathematics. Most procedures and precepts of modern science took hold during the 18th century when scientists first paired scientific research with practical application to astonishing results. In over 60 alphabetical entries, Shectman examines the tremendous scientific discoveries, inventions, and inquiries of the period. Familiar topics such as the steam engine and hot air balloon are covered along with lesser-known topics such as the Watt copy press and Newton's *experimentum crucis*. A thorough discussion of each entry's scientific impact provides readers with an understanding of the lasting social and political importance of these advancements. Narratives enrich the entries by adding context and perspective to the century's fascinating scientific history. Students and researchers will find this reference book easy to use. Included are an appendix of entries listed by scientific field, a glossary of terms, indexes by name and subject.
