Book: *Oliver Blanchard (2021) Macroeconomics, eighth global edition. Pearson.*

## Lecture 1: Introduction & Course Overview – chap 1 & 2

### Three Key Macroeconomic Concepts

#### 1. Aggregate Output

- national income accounts are used to measure aggregate economic activity
- key measures include gdp, gdi (income) and  $gdp = gdi$ , by constructions
- ways to measure aggregate output:
  - o GDP is the total value of the **final** goods and services produced (Intermediate good – steel, final good – car)
  - o GDP is the total value-added
  - o total income \*gdi

#### Nominal GDP

- sum of quantities x current prices where prices denominated in dollars

#### Real GDP

- sum of quantities x constant prices
- control for change in purchasing power of a dollar
- choice of prices defines base year (where for that year, nominal gdp = real gdp)

#### 2. Inflation

- inflation is sustained increase in general level of prices
- inflation rate is percent change in price level
- deflation is sustained decrease in general level of prices
- measures of price level
  - o gdp deflator ( $P_t$ ) – ratio will be 1 in base year

$\$Y_t$  = nominal GDP in period t

$Y_t$  = real GDP in period t

$P_t = \$Y_t / Y_t \times 100$

- o consumer price index
- inflation rate

$$\pi_t = \frac{P_t - P_{t-1}}{P_{t-1}} \times 100$$

#### 3. Unemployment

$L = E + U$  = labor force (no. of ppl)

E = employed

U = unemployed

Unemployment rate in given period,  $u = U/L$

Participation rate in given period =  $L/\text{working age population}$

- of those in the working age population without jobs, only those looking for work are counted as unemployed
- not working and not looking = not in labour force

**The Macroeconomics of Developing Countries** Giovanni Andrea Cornia, 2020 The book focuses on the short and long term macroeconomic challenges faced by developing countries characterized by missing incomplete and dualistic markets and weak institutions Such problems affect long term growth short term macroeconomic equilibrium employment and inequality far more than in the advanced economies A central message of the book is that ignoring these features and applying to developing countries models inspired by the reality of advanced economies may lead to wrong conclusions and policies These

challenges are discussed for a number of archetypes of developing economies dependent on land and natural resources affected by supply rigidities in agriculture and featuring dualistic markets a dominant informal sector fast population growth and chronic dependence on the export of commodities and a volatile external finance Finally the book discusses the impact on growth inequality and poverty of the stabilization and structural adjustment reforms that were increasingly implemented during the last 30 years These issues have acquired center stage after the launch of the Millennium Development Goals and Sustainable Development Goals initiatives that have not spelled out a clear macroeconomic approach There is a risk therefore that wrong policies and sudden shocks may derail the progress towards the SDGs achieved by means of social policies
