Architecture--art Or Profession? Mark Crinson, Jules Lubbock, 1994

Architects are perhaps the most important people involved in shaping the built environment so the ideas they receive in the course of their training are a major influence upon the buildings and cities of the future Crinson and Lubbock present a bold new perspective on the evolution of the British architect from Wren to post modernism and beyond and provide the first general history of architectural education making an important contribution to current debates

The Prince of Wales views on modern architecture and the need for a change in the way architects are trained has attracted enormous support from the public resulting in architects and their training being under the spotlight more than ever The drive to define and promote the architectural profession that began in the eighteenth century and reached its apogee in the 1960s has now begun to unravel How has this happened What relation does an architect s education have to the built environment What lessons are there from the past This book will be of interest to students lecturers and all those interested in the debates around contemporary architecture

Gender Equity in Science and Engineering Diana Bilimoria, Xiangfen Liang, 2012-02-06

Women faculty s participation in academic science and engineering is critical for future US global competitiveness yet their underrepresentation particularly in senior positions remains a widespread problem To overcome persistent institutional resistance and barriers to change the NSF ADVANCE institutional transformation initiative instituted in 2001 seeks to increase the workforce participation of women faculty in academic science and engineering through

systematic institutional transformation This book assesses the equity diversity and inclusion outcomes of the changes underway at 19 universities It provides a comprehensive stand alone description of successful approaches to increase the recruitment advancement and retention of women faculty throughout the academic career pipeline The findings show that targeted institutional transformation at these 19 U S universities has resulted in significant increases in women faculty s workforce participation as well as improved gender equity and inclusion Analyses by discipline show that the greatest changes have occurred within engineering and natural science disciplines at these universities Yet the results also point to the overall continued underrepresentation of women faculty in academic science and engineering at the nation s research universities A framework of organizational change is derived to serve as a template to academic and other organizations seeking transformation to enhance gender equity diversity and inclusion

Building Physics - Heat, Air and Moisture Hugo S. L. C. Hens, 2008-03-28 Bad experiences with construction quality the energy crises of 1973 and 1979 complaints about sick buildings thermal acoustical visual and olfactory discomfort the move towards more sustainability have all accelerated the development of a field which until 35 years ago was hardly more than an academic exercise building physics Through the application of existing physical knowledge and the combination with information coming from other disciplines the field helps to understand the physical performance of building parts buildings and the built environment and translates it into correct design and construction This book is the result of thirty years teaching research and consultancy activity of the author The book discusses the theory behind the heat and mass transport in and through building components Steady and non steady state heat conduction heat convection and thermal radiation are discussed in depth followed by typical building related thermal concepts such as reference temperatures surface film coefficients the thermal transmissivity the solar transmissivity thermal bridging and the periodic thermal properties Water vapour and water vapour flow and moisture flow in and through building materials and building components is analyzed in depth mixed up with several engineering concepts which allow a first order analysis of phenomena such as the vapour balance the mold mildew and dust mites risk surface condensation sorption capillary suction rain absorption and drying In a last section heat and mass transfer are combined into one overall model staying closest to the real hygrothermal response of building components as observed in field experiments The book combines the theory of heat and mass transfer with typical building engineering applications The line from theory to application is dressed in a correct and clear way In the theory oversimplification is avoided This book is the result of thirty years teaching research and consultancy activity of the author
