

FUNDAMENTALS OF METAL FORMING

Metal Forming

- Large group of manufacturing processes in which plastic deformation is used to change the shape of metal workpieces
- The tool, usually called a **die**, applies stresses that exceed yield strength of metal
- The metal takes a shape determined by the geometry of the die

Stresses in Metal Forming

- Stresses to plastically deform the metal are usually **compressive**
Examples: forging, rolling, extrusion
- However, some forming processes:
 - Stretch the metal (**tensile** stresses)
 - Others bend the metal (tensile and compressive)
 - Still others apply **shear** stresses

*Tensile - capable of being stretched or extended; ductile.
 *Shear stress - exists when two parts of a material tend to slide across each other in any typical plane of shear upon application of force parallel to that plane.

Material Properties in Metal Forming

Desirable material properties:

- **Low yield strength and high ductility**

*Yield strength refers to an indication of maximum stress that can be developed in a material without causing plastic deformation.

These properties are affected by temperature:

Ductility increases and yield strength decreases when work temperature is raised

Other factors:

Strain rate and friction

Bulk Deformation Processes

- Characterized by significant deformations and massive shape changes
- "**Bulk**" refers to workparts with relatively low surface area-to-volume ratios
- Starting work shapes include cylindrical billets and rectangular bars

Handbook Of Metal Forming Processes:

Handbook of Metal-forming Processes Betzalel Avitzur,1983 *Handbook of Metalforming Processes* Henry Ericsson Theis,1999-05-26 Reflecting hands on experience of materials equipment tooling and processes used in the industry this work provides up to date information on flat rolled sheet metal products It addresses the processing and forming of light to medium gauge flat rolled sheet metal illustrating the versatility and myriad uses of this material Metal Forming Handbook Schuler GmbH,2012-12-06 Following the long tradition of the Schuler Company the Metal Forming Handbook presents the scientific fundamentals of metal forming technology in a way which is both compact and easily understood Thus this book makes the theory and practice of this field accessible to teaching and practical implementation The first Schuler Metal Forming Handbook was published in 1930 The last edition of 1966 already revised four times was translated into a number of languages and met with resounding approval around the globe Over the last 30 years the field of forming technology has been radically changed by a number of innovations New forming techniques and extended product design possibilities have been developed and introduced This Metal Forming Handbook has been fundamentally revised to take account of these technological changes It is both a text book and a reference work whose initial chapters are concerned to provide a survey of the fundamental processes of forming technology and press design The book then goes on to provide an in depth study of the major fields of sheet metal forming cutting hydroforming and solid forming A large number of relevant calculations offers state of the art solutions in the field of metal forming technology In presenting technical explanations particular emphasis was placed on easily understandable graphic visualization All illustrations and diagrams were compiled using a standardized system of functionally oriented color codes with a view to aiding the reader's understanding

Handbook of Metal Forming Kurt Lange,Klaus Pöhlandt,1985 *Handbook of Metalforming Processes* Henry Ericsson Theis,1999-05-26 Reflecting hands on experience of materials equipment tooling and processes used in the industry this work provides up to date information on flat rolled sheet metal products It addresses the processing and forming of light to medium gauge flat rolled sheet metal illustrating the versatility and myriad uses of this material **Handbook of Fabrication Processes** Orville D. Lascoe,1988-01-01 This book is a valuable reference for the materials engineer the manufacturing engineer or the technician who wants a practical description of fabrication processes Sheet metal fabrication processes are receiving greater attention and are more widely applied by the metalworking industries because of the savings in cost and material This book compiles the proven theories and operations tested in industrial applications Focus is on the non chip producing machine tools that shape metals by shearing pressing and forming New materials and advances in tooling are discussed as well as the need for applied science in optimizing the operations for sheet metal fabrication processes Examples of each of these forming processes are given and the text also describes the mechanics of each process so that a logical decision can be made concerning the best operation for a specific result The volume is divided into five sections each

consisting of a series of chapters The major sections cover fabricating presses stamping and forming operations plastics for tooling structural shapes and non traditional machining A section on definitions and terminology is also included The book is profusely illustrated and indexed making it easy to find references to specific forming topics Written by an expert with 40 years of hands on practical engineering experience this Handbook contains the essential information you need on forming methods machinery and the response of materials
