**Handbook on E-marketing for Tourism Destinations** Peter Varlow,2008 The internet and other new technologies have changed the tourism industry in an unprecedented way and keeping pace has become challenging Online information is now one of the primary influences on consumer decisions in nearly all major markets For example 41 per cent of tourists arriving in Spain in 2007 had booked through the internet and in the United States the number of trips bought online exceeded those purchased offline Such changes are impacting and influencing the way destinations and companies manage and market themselves

**Alchemical Libraries Almanack** ,2006 **Lingua Fracta** Collin Gifford Brooke,2009 This book begins from the assumption that there is an intrinsically technological dimension to rhetoric arguing that we have become so accustomed to practicing rhetoric in the context of print technologies that we have often naturalized or ignored that dimension New communication and information technologies do not simply provide us with new sites of rhetorical practice instead they challenge us to reconceive rhetoric altogether This groundbreaking volume argues that a rhetoric of new media should attend to ecologies of practice treating interfaced rather than texts as our sites and units of analysis To devise such a rhetoric the book offers a systematic reconsideration of the canons of classical rhetoric Rather than understanding the canons as stages in a linear composing process this book describes the canons as repertoires of multiple practices that shift as we move among media Drawing on examples that range from Wikipedia to World of Warcraft the book reconstitutes the canons restoring to them the vitality they held for ancient rhetoricians and reshaping them into a framework for understanding the technological developments facing future generations

*Show Me the Numbers* Stephen Few,2012 Information no matter how important cannot speak for itself To tell its story it relies on us to give it a clear voice No information is more critical than quantitative data numbers that reveal what s happening how our organizations are performing and opportunities to do better Numbers are usually presented in tables and graphs but few are properly designed resulting not only in poor communication but at times in miscommunication This is a travesty because the skills needed to present quantitative information effectively are simple to learn Good communication doesn t just happen it is the result of
