

INTRODUCTION TO ASPEN PLUS SIMULATION

What is Process Simulation/Analysis?

The purpose of process simulation is to model and predict the performance of a process. It involves the development of the process into the mathematical equations (e.g. mass and energy balance) that will be solved. The process description is a flowchart, composition, temperature, composition, process, pressure, equipment sizes, etc. It is predicted using analysis techniques (flow simulation, steady state simulation, dynamic simulation) and computer software packages (e.g. ASPEN Plus). In addition, process analysis may involve the use of experimental data to predict and validate performance. Therefore, in process simulation, we use given the process inputs and flowchart and we calculate the steady state process (Fig. 1). The software used is ASPEN Plus. It is a computer-aided software which uses the underlying physical relationships (e.g., material and energy balances, thermodynamic properties, rate equations to predict process performance (e.g., stream properties, operating conditions, and equipment sizes).

Fig. 1. Process Simulation Problem.

There are several advantages of computer-aided simulation:

- Allows the designer to quickly test the performance of complex process structures and provide feedback to the process synthesis activities.
- Can be incorporated with process synthesis to finding optimum integrated designs.
- Minimizes experimental and scale-up efforts.
- Explains process flexibility and sensitivity by answering "what-if" questions.
- Quantitatively predicts the process and plant design/operating process performance.

Despite these advantages, there are some limitations including the increasing number of complex plant simulation:

- It is hard to quickly test the simplified RST simulation.
- The computational power needed to solve large-scale RST plant simulation.
- The ASPEN Plus simulation predicts that the simulated model under physical process conditions may not be able to solve the simulation because of the number of parameters.
