Introduction to IP and ATM Design and Performance Jonathan M. Pitts, John A. Schormans, 2000 Many engineers and students experience difficulty in making sense of issues associated with IP and ATM teletraffic techniques This is partly because of the subject itself networks are flexible complicated and still evolving However some of the difficulties arise because of the advanced mathematical methods that have been applied to provide analytic tools The research literature abounds with many and varied analytical approaches applied to a bewildering array of traffic mixes switch designs and traffic control mechanisms Introduction to IP and ATM Design and Performance provides an introduction to IP and ATM traffic issues performance evaluation using analysis and simulation presentation of key formulas describing traffic and queueing behaviour and practical examples graphs and tables for the design of wide area networks Particular areas addressed include the fundamental traffic control functions connection admission control usage parameter control priority control queue scheduling and buffer management Features include Clear Expansion of typical traffic and queueing behaviour Simple exposition of fundamental performance evaluation methods and techniques for ATM and IP All formulas are available in MathCAD files on the related web site Avoids the use of advanced mathematical methods This simple intuitive approach is easy to follow and will benefit both engineers in the telecommunications industry and undergraduate and postgraduate students in telecommunications communications engineering computer engineering courses

New Approaches to Identifying Structures Using Geometric Structure Analysis: Design and Adaptation Karabutov, Nikolay Nikolayevich, 2025-09-10 An actual problem of identification theory is considered related to the non formalized task of evaluating the model structure Novel approaches to structural identification SI propose solutions to various problems of identification theory based on the analysis of geometric frameworks GFs This formalized approach to the structural identifiability SID for nonlinear dynamical systems of various classes shows that structural identifiability follows from SI Additionally based on the GF estimates for the Lyapunov exponents LEs of dynamical systems are shown to be recoverable

detectable and identifiable When combined with synthesized methods and algorithms they can be applied to the construction of mathematical models for complex processes and systems Thus they can be used in decision making systems process forecasting control of nonlinear systems and processing of heterogeneous time series Novel Approaches to Structural Identification Using Geometric Framework Analysis proposes various solutions to the problem of identification theory It discusses the development of adaptive identification and control systems for analyzing complex processes and systems Covering topics such as parametric restrictions distributed lags and interconnected systems this book is an excellent resource for data analysis specialists mathematical software developers professionals researchers scholars academicians and more
