physics and engineering setting the stage for the book s main topics physics informed neural networks and the deep energy method The idea of the book is to provide the basic concepts in a mathematically sound manner and yet to stay as simple as possible To achieve this goal mostly one dimensional examples are investigated such as approximating functions by neural networks or the simulation of the temperature s evolution in a one dimensional bar Each chapter contains examples and exercises which are either solved analytically or in PyTorch an open source machine learning framework for python **Data Intensive Computing Applications for Big Data** Mamta Mittal,Valentina Emilia Balas,D. Jude Hemanth,Raghvendra Kumar,2018-01-15 The book Data Intensive Computing Applications for Big Data discusses the technical concepts of big data data intensive computing through machine learning soft computing and parallel computing paradigms It brings together researchers to report their latest results or progress in the development of the above mentioned areas Since there are few books on this specific subject the editors aim to provide a common platform for researchers working in this area to exhibit their novel findings The book is intended as a reference work for advanced undergraduates and graduate students as well as multidisciplinary interdisciplinary and transdisciplinary research workers and scientists on the subjects of big data and cloud parallel and distributed computing and explains didactically many of the core concepts of these approaches for practical applications It is organized into 24 chapters providing a comprehensive overview of big data analysis using parallel computing and addresses the complete data science workflow in the cloud as well as dealing with privacy issues and the challenges faced in a data intensive cloud computing environment The book explores both fundamental and high level concepts and will serve as a manual for those in the industry while also helping beginners to understand the basic and advanced aspects of big data and cloud computing Doing AI Richard Heimann,2021-12-14 Artificial intelligence AI has captured our imaginations and become a distraction Too many leaders embrace the oversized narratives of artificial minds outpacing human intelligence and lose sight of the original problems they were meant to solve When businesses try to do AI they place an abstract solution before problems and customers without fully considering whether it is wise whether the hype is true or how AI will impact their organization in the long term Often absent is sound reasoning for why they should go down this path in the first place Doing AI explores AI for what it actually is and what it is not and the problems it can truly solve In these pages author Richard Heimann unravels the tricky relationship between problems and high tech solutions exploring the pitfalls in solution centric thinking and explaining how businesses should rethink AI in a way that aligns with their cultures goals and values As the Chief AI Officer at Cybraics Inc Richard Heimann knows from experience that AI specific strategies are often bad for business Doing AI is his comprehensive guide that will help readers understand AI avoid common pitfalls and identify beneficial applications for their companies This book is a must read for anyone looking for clarity and practical guidance for identifying problems and effectively solving them rather than getting sidetracked by a shiny new solution that doesn t solve anything Feature Engineering for Machine Learning and Data Analytics Guozhu Dong,Huan Liu,2018-03-14

Feature engineering plays a vital role in big data analytics Machine learning and data mining algorithms cannot work without data Little can be achieved if there are few features to represent the underlying data objects and the quality of results of those algorithms largely depends on the quality of the available features Feature Engineering for Machine Learning and Data Analytics provides a comprehensive introduction to feature engineering including feature generation feature extraction feature transformation feature selection and feature analysis and evaluation The book presents key concepts methods examples and applications as well as chapters on feature engineering for major data types such as texts images sequences time series graphs streaming data software engineering data Twitter data and social media data It also contains generic feature generation approaches as well as methods for generating tried and tested hand crafted domain specific features The first chapter defines the concepts of features and feature engineering offers an overview of the book and provides pointers to topics not covered in this book The next six chapters are devoted to feature engineering including feature generation for specific data types The subsequent four chapters cover generic approaches for feature engineering namely feature selection feature transformation based feature engineering deep learning based feature engineering and pattern based feature generation and engineering The last three chapters discuss feature engineering for social bot detection software management and Twitter based applications respectively This book can be used as a reference for data analysts big data scientists data preprocessing workers project managers project developers prediction modelers professors researchers graduate students and upper level undergraduate students It can also be used as the primary text for courses on feature engineering or as a supplement for courses on machine learning data mining and big data analytics **Robotica** Ronald K. L. Collins,David M. Skover,2018-05-31 In every era of communications technology whether print radio television or Internet some form of government censorship follows to regulate the medium and its messages Today we are seeing the phenomenon of machine speech enhanced by the development of sophisticated artificial intelligence Ronald K L Collins and David M Skover argue that the First Amendment must provide defenses and justifications for covering and protecting robotic expression It is irrelevant that a robot is not human and cannot have intentions what matters is that a human experiences robotic speech as meaningful This is the constitutional recognition of intentionless free speech at the interface of the robot and receiver Robotica is the first book to develop the legal arguments for these purposes Aimed at law and communication scholars lawyers and free speech activists this work explores important new problems and solutions at the interface of law and technology *Neural Computation* ,1995 *Learning from Data* Yaser S. signal processing ISP ISP differs fundamentally from the classical approach to statistical signal processing in that the input output behavior of a complex system is modeled by using intelligent or model free techniques rather than relying on the shortcomings of a mathematical model Information is extracted from incoming signal and noise data making few assumptions about the statistical structure of signals and their environment Intelligent Signal Processing explores how ISP tools address the problems of practical neural systems new signal data and blind fuzzy approximators The editors have compiled 20 articles written by prominent researchers covering 15 diverse practical applications of this nascent topic exposing the reader to the signal processing power of learning and adaptive systems This essential reference is intended for researchers professional engineers and scientists working in statistical signal processing and its applications in various fields such as humanistic intelligence stochastic resonance financial markets optimization pattern recognition signal detection speech processing and sensor fusion Intelligent Signal Processing is also invaluable for graduate students and academics with a background in computer science computer engineering or electrical engineering About the Editors Simon Haykin is the founding director of the Communications Research Laboratory at McMaster University Hamilton Ontario Canada where he serves as university professor His research interests include nonlinear dynamics neural networks and adaptive filters and their applications in radar and communications systems Dr Haykin is the editor for a series of books on Adaptive and Learning Systems for Signal Processing Communications and Control Publisher and is both an IEEE Fellow and Fellow of the Royal Society of Canada Bart Kosko is a past director of the University of Southern California s USC Signal and Image Processing Institute He has authored several books including Neural Networks and Fuzzy Systems Neural Networks for Signal Processing Publisher copyright date and Fuzzy Thinking Publisher copyright date as well as the novel Nanotime Publisher copyright date Dr Kosko is an elected governor of the International Neural Network Society and has chaired many neural and fuzzy system conferences Currently he is associate professor of electrical engineering at USC   *IEEE International Symposium on Information Theory, 1993* IEEE Information Theory Society,1993   Artificial Intelligence Abstracts ,1990   **IEEE International Symposium on Information Theory** ,1992   **Journal of Financial Economics** ,1999   **AI Magazine** ,1999   **Journal of the British Interplanetary Society** British Interplanetary Society,1994 Bound with vol 1 1934 is the Society s annual report and list of members 1934   World Information Technology Manual: Computers, telecommunications, and information processing A.
