Models	<ul style="list-style-type: none"> - Strip away unnecessary complexity, allow focus on core features of a problem - No universal models, all context specific - Mathematical models force specificity and lower probability of incomplete thinking - Sometimes rely upon unrealistic assumptions, however omitted details may not matter

Supply and demand (2)				
Basics	<p>Upward sloping supply:</p> <ul style="list-style-type: none"> - If prices increase, quantity that firms are willing to sell increases - If quantity sold increases, prices needed to attract suppliers increases <p>Downward sloping demand:</p> <ul style="list-style-type: none"> - If prices increase, quantity that consumers are willing to buy decreases - If quantity bought increases, prices needed to attract more demand decrease <p>Elasticity - the percentage change in one variable resulting from a 1% increase in another</p> <ul style="list-style-type: none"> - Price elasticity of demand normally negative, refer to magnitude - If $E_p > 1$ = price elastic (small change in \$ causes big change in Qd) - If $E_p < 1$ = price inelastic (big change in \$ causes small change in Qd) <p>Tax:</p> <ul style="list-style-type: none"> - Supply curve shifts up (sub $P_s + t$) - Demand curve shifts down (sub $P_d - t$) 			
Limitations	<ul style="list-style-type: none"> - Demand curve derived in an improvised manner, doesn't account for following heterogeneous effects: <ul style="list-style-type: none"> o Income levels o Preferences - E.g. junk food tax example - higher price will raise cost of living 			
Individual choice	<ul style="list-style-type: none"> - Agents (consumers) make decisions according to constraints (price and income) on the optimal basket of two goods - i.e. budget constraint (constrained optimization) - Optimal point where MB of consuming more = MC of more which is equal to derivative of net benefit <p>Policies to encourage consumption (i.e. flip so $MB > MC$):</p> <ul style="list-style-type: none"> - Conditional cash transfers - Tax on high-income earners who don't purchase private insurance - Subsidise GP fees (early detection) to avoid higher cost of future treatment (short termism) 			
Consumer Preferences (3)				
Consumer choice model	<ul style="list-style-type: none"> - Model to examine how typical consumer, given her budget constraint, decides on optimal basket - Model of consumer built in three distinct steps:

and policy makers Those who employ people those who represent workers those who make laws and those who elect them need economics but may have little time or desire to study it This book makes economics easily available to everyone The author s use of simple language and avoidance of technical jargon provides non economists with a better understanding of economic reasoning and the tools to know and to decide The author achieves this through introducing key concepts in short presentations and arming the reader with selected press articles and recent research using these concepts An analysis of these demonstrates how a general concept can be derived from a specific context and highlighted questions provide the basis for further debate The reader can then focus on the parts most relevant to their own needs This book will have great appeal to employers trade unionists and public officials attending courses organized by international institutions professional training providers as well as graduate students of courses where economics is an important element especially in relation to its policy implications Finally it is invaluable for anybody who has wanted to learn the basics of practical economics but has been deterred by its technicalities

these information intermediaries can be found in multiple forms on the Internet e.g search engines thematic oriented subject
directories and electronic product catalogues The model identifies the basic influencing factors of the intermediary's
