Pre-university Engineering Education Marc J. de Vries, Lena Gumaelius, Inga-Brit Skogh, 2016-07-28 Pre university engineering education has become the topic of increasing interest in technology education circles It can provide content for the E in STEM Science Technology Engineering and Mathematics education which is in the interest of technology educators at different educational levels as it builds the bridge between them and the science and mathematics educators In this book goals for pre university engineering education are explored as well as existing practices from a variety of countries The coming years will show if pre university engineering education will catch on The trend towards STEM integrated education that today can be seen in many countries will certainly create a further need and stimulus for that to happen Hopefully this book can contribute to such a development of both formal and informal K 12 engineering education Not only for preparing the next generation of engineers but also for the technological literacy of future citizens

Project Management for Research and Development Lory Mitchell Wingate, 2025-04-03 Research and development R D activities do not fit the traditional project model They may seem difficult to manage because of their inherent ambiguity the need for creative exploration and often the lack of having defined milestones and outcomes However project management methods along with systems engineering as a complementary discipline provide the ability to categorize R D activities bound them and then assess progress along a defined course of action They also provide information about status and progress visibility into opportunities and challenges that might otherwise be missed allowing timely course corrections

Project Management for Research and Development Guiding Innovation for Positive R D Outcomes Second Edition provides methods for optimizing results in R D by using structured processes that come from project management and are intertwined with the key complementary discipline of systems engineering It provides processes tools and techniques to assess and manage creative activities in an optimal way The core of the book is a flexible framework which lifts the burden off organizations that do not want to invest heavily in implementing a significant number of often conflicting processes It is a lightweight flexible structure to help organizations and individuals meet their most important goals no matter how complicated or complex these goals may be Each chapter in the book includes Apply Now exercises which allow immediate application of fundamental concepts summarizes key points of concepts and terms and provides templates to apply the ideas from each chapter to a real life situation The book also features unique and creative case studies to demonstrate the application of project management to

various R D projects Cognition, Metacognition, and Culture in STEM Education Yehudit Judy Dori,Zemira R. Mevarech,Dale R. Baker,2017-12-01 This book addresses the point of intersection between cognition metacognition and culture in learning and teaching Science Technology Engineering and Mathematics STEM We explore theoretical background and cutting edge research about how various forms of cognitive and metacognitive instruction may enhance learning and thinking in STEM classrooms from K 12 to university and in different cultures and countries Over the past several years STEM education research has witnessed rapid growth attracting considerable interest among scholars and educators The book provides an updated collection of studies about cognition metacognition and culture in the four STEM domains The field of research cognition and metacognition in STEM education still suffers from ambiguity in meanings of key concepts that various researchers use This book is organized according to a unique manner Each chapter features one of the four STEM domains and one of the three themes cognition metacognition and culture and defines key concepts This matrix type organization opens a new path to knowledge in STEM education and facilitates its understanding The discussion at the end of the book integrates these definitions for analyzing and mapping the STEM education research Chapter 4 is available open access under a Creative Commons Attribution 4 0 International License via link springer.com E-Learning Adilson Guelfi,Elvis Pontes,Sergio Kofuji,2012-02-17 Technology development mainly for telecommunications and computer systems was a key factor for the interactivity and thus for the expansion of e learning This book is divided into two parts presenting some proposals to deal with e learning challenges opening up a way of learning about and discussing new methodologies to increase the interaction level of classes and implementing technical tools for helping students to make better use of e learning resources In the first part the reader may find chapters mentioning the required infrastructure for e learning models and processes organizational practices suggestions implementation of methods for assessing results and case studies focused on pedagogical aspects that can be applied generically in different environments The second part is related to tools that can be adopted by users such as graphical tools for engineering mobile phone networks and techniques to build robots among others Moreover part two includes some chapters dedicated specifically to e learning areas like engineering and architecture

Educational Foundation, 2004 In the past decade increasing attention has been paid to the issue of gender equity in the science technology engineering and mathematics STEM fields The research for this report led by Yasmin Kafai and a team of researchers at the University of California Los Angeles was guided by several overarching questions 1 What types of projects have been funded within and across the various STEM disciplines 2 Are there areas where efforts been concentrated and areas that have been overlooked 3 What patterns emerge among the project types and disciplines The findings document impressive efforts in preparing girls and women for science technology engineering and mathematics studies and careers and demonstrate a rich and diverse body of gender equity intervention projects within all STEM disciplines About two thirds of the projects involved extracurricular informal learning activities such as museum visits and field trips Equally important were mentoring activities in many forms ranging from traditional one to one to large scale online versions and professional development activities such as course taking and network building that were successfully integrated into projects At the same time the findings reveal some troubling trends Many projects focused predominantly on career advice without

providing access to necessary skill and content development A majority of projects occurred outside the school curriculum While such extracurricular projects can be effective and valuable the overall lack of integration into the school curriculum suggests that gender equity remains on the margins of teaching and learning in the STEM fields Finally an absence of data on participant demographics and a lack of project evaluation make it difficult to determine who is being served and if and how project outcomes are being measured Perhaps most notably the findings reveal hundreds of excellent and dynamic projects but no consolidated collective strategy to advance gender equity in STEM The recommendations in this report reflect this problem suggesting among others the need for more integrated efforts inside and outside of school more interdisciplinary and cross age connections and consistent documentation and evaluation across disciplines and project types
