**Open Source Software** Stephanos Androutsellis-Theotokis, Diomidis Spinellis, Maria Kechagia, Georgios Gousios, 2011-09 Open Source Software A Survey from 10 000 Feet provides an overview of the history development and applications of open source software OSS OSS is software distributed with a license allowing access to its source code free redistribution the creation of derived works and unrestricted use The history of open source software can be traced back to the 1950s Open source applications cover most areas of consumer and business software The organization of open source development projects often differs from proprietary ones in terms of their organizational structure membership leadership contribution policies and quality control Behind a successful OSS project is its community ranging from core developers to passive users The key defining element of open source software is its license which must satisfy a list of important requirements There are numerous open source licenses and they mainly differ in how they treat derived software some contain provisions that maintain its availability in open source form while others allow more flexibility The emergence of open source software is fueling the economy as a whole through its widespread adoption as a cheap alternative to pricey proprietary products and as a driver behind many successful e business ventures Open source is also directly affecting specific sectors the software development industry through competition and new business opportunities hardware development through lower cost and barriers of entry consumer led innovation and policy enforcement difficulties academia through valuable opportunities for research and student involvement in real world applications as well as the availability of software tools and the provision of pioneering new courses It can lead to new design production marketing and business models as well as ways to develop large complex software systems in an organic manner Challenges lie ahead and problems still need to be overcome so the potential for future research on OSS is large More important however is the ability of open source development models to democratize technology and innovation

*Open Source Software: The Beginning Of A New Era* Binayaka Mishra,2017-06-06 In 1998 a group of individuals advocated that the term free software should be replaced by open source software OSS as an expression which is less ambiguous and more comfortable for the corporate world Software developers may want to publish their software with an open source license so that anybody may also develop the same software or understand its internal functioning With open source software generally anyone is allowed to create modifications of it port it to new operating systems and instruction set architectures share it with others or in some cases market it Scholars Casson and Ryan have pointed out several policy based reasons for adoption of open source in particular the heightened value proposition from open source when compared to most proprietary formats in the following categories Security Affordability Transparency Perpetuity Interoperability Flexibility Localization particularly in the context of local governments who make software decisions Casson and Ryan argue that governments have an inherent responsibility and fiduciary duty to taxpayers which includes the careful analysis of these factors when deciding to purchase proprietary software or implement an open source option

**Open Source and Proprietary Software** Chris Nosko,Daniel D. Garcia-Swartz,Anne Layne-Farrar,2014 The open source software development model has been hailed as the most significant change in computing since Apple played David to IBM s Goliath Yet enterprises dedicated to bringing open source into the mainstream of the information economy have had a rough time finding ways to stay afloat financially While traditional software companies can generate revenue from the sale of their intellectual property this is hard to do with open source software because the developers retain only limited rights in the products The approach adopted by some open source companies is to honor open source in spirit while inching toward fees for the use of intellectual property These firms have created hybrid business models that combine elements of free code with code that is licensed for cash Ironically in the wake of the dot com bust even firms licensing software in traditional ways have been struggling to cope Many of these proprietary

software makers have found they can better satisfy their customers and generate more profit by adopting aspects of the open source development process We take a closer look at both kinds of companies to illustrate how very different sorts of developers are moving towards a fruitful convergence We conclude that open source companies are more likely to succeed if they can use open source products as entree into domains protected by traditional intellectual property and that proprietary companies can benefit from open source software development without abandoning revenues from intellectual property Open source and proprietary development models remain distinct but we predict that less software will be licensed at either extreme in the future Open Source Development, Communities and Quality Barbara Russo,Ernesto Damiani,Scott Hissam,Björn Lundell,Giancarlo Succi,2008-07-11 We are very pleased to introduce Open Source Development Communities and Quality The International Conference on Open Source Systems has come to its fourth edition OSS 2008 Now Free Libre and Open Source software is by all means now one of the most relevant subjects of study in several disciplines ranging from information technology to social sciences and including also law business and political sciences There are several conference tracks devoted to open source software with several publications appearing in high quality journals and magazines OSS 2008 has been organized with the purpose of being the reference venue for those working in this area being the most prominent conference in this area For this th reason OSS 2008 has been located within the frameworks of the 20 World Computer Congress WCC 2008 in Milan the largest event of IFIP in 2008 We believe that this conference series and the IFIP working group it represents can play an important role in meeting these challenges and hope that this book will become a valuable contribution to the open source body of research **The Open Source Handbook** Michael R.
