Innovation in Latin America gathers scholars from all over Latin America to present their research exploring the dual aspects of technology and innovation and their interrelatedness **Energy Justice in Latin America** Adolfo

Mejía-Montero, 2025-02-18 This book presents valuable insights, critiques and contributions from energy researchers focused on Latin American case studies. Their work not only enriches the understanding of energy justice but also addresses a significant gap in the current academic literature. Since it was coined as an academic term more than ten years ago, energy justice has experienced accelerated growth as a relevant and widely recognised concept that allows energy researchers to engage with diverse energy issues. Nevertheless, energy justice still faces theoretical and empirical gaps, including a lack of diversity in author demographics and case studies coming from regions in the Global South. Against this backdrop, this book brings together 30 authors whose research draws from Latin American countries like Argentina, Brazil, Bolivia, Chile, Costa Rica, Ecuador, Mexico, Panama, and Peru, as well as wider regional perspectives. The selected case studies combine low carbon transitions, regulations and technologies with issues of gender, indigeneity, neo-colonialism, autonomy, poverty and inequality. Importantly, the chapters examine how energy justice might influence existing approaches and worldviews on sustainability, which strive for just and clean future energy systems by redressing regional inequalities and tackling the global challenge of climate change. As such, *Energy Justice in Latin America* opens new spaces for a growing research community to redefine and jointly construct a more complete, regionally specific notion of energy justice. Highlighting the ways in which the discussion included in this book resonates with other regions in the Global South, this volume will be of great interest to students and scholars of energy justice, energy poverty, energy democracy and energy policy, as well as Latin American studies more broadly. **Negotiating Climate Change in Crisis** Steffen Böhm, Sian Sullivan, 2021-09-28

Climate change negotiations have failed the world. Despite more than thirty years of high level global talks on climate change, we are still seeing carbon emissions rise dramatically. This edited volume, comprising leading and emerging scholars and climate activists from around the world, takes a critical look at what has gone wrong and what is to be done to create more decisive action. Composed of twenty-eight essays, a combination of new and republished texts, the anthology is organised around seven main themes: paradigms, what counts, extraction, dispatches from a climate change frontline, country governance, finance and action. Through this multifaceted approach, the contributors ask pressing questions about how we conceptualise and respond to the climate crisis, providing both big picture perspectives and more focussed case studies. This unique and extensive collection will be of great value to environmental and social scientists alike, as well as to the general reader interested in understanding current views on the climate crisis. **Renewable Energy and the Public** Patrick Devine-Wright, 2014-10-14

Throughout the world, the threat of climate change is pressing governments to accelerate the deployment of technologies to generate low carbon electricity or heat. But this is frequently leading to controversy, as energy and planning policies are revised to support new energy sources or technologies, e.g. offshore wind, tidal, bioenergy or hydrogen energy, and communities face the prospect

of unfamiliar often large scale energy technologies being sited near to their homes Policy makers in many countries face tensions between streamlining planning procedures engaging with diverse publics to address what is commonly conceived as NIMBY not in my back yard opposition and the need to maintain democratic participatory values in planning systems This volume provides a timely international review of research on public engagement in contexts of diverse innovative energy technologies Public engagement is conceived broadly as the interaction between how developers and other key actors engage with publics about energy technologies including assumptions held about the methods used such as the provision of financial benefits or the holding of deliberative events and how individuals and groups engage with energy policies and projects including indirectly through the media and directly through emotional and behavioural responses The book s contributors are leading experts in the UK Europe North and South America and Australia drawn from a variety of relevant social science disciplinary perspectives The book makes a significant contribution to our existing knowledge as well as providing interested professionals policymakers and members of the public with a timely overview of the critical issues involved in public engagement with low carbon energy technologies *Sustainable Energy, 2nd* Richard A.
