**Harnessing Cloud Computing to Redefine Banking IT Operations for Scalable and Secure Systems** Sapana Garud, 2025-02-18. The growth of high-speed networks and computing power is making it possible to process different banking services or applications in microseconds, undreamed of in the past. These rapid explosions of technology are changing the banking industries from paper and branch banks to digitized and networked banking services. Wakeham (2010) notes that delivering banking services on this networked environment are more convenient and effective than ever before. Expanding the geographical coverage of digitized and networked banking services are the mainstays for banks to deliver QoS to customers. NBE (2012) notes that in developing countries, the cost of expanding the geographical coverage of digitized and networked banking services to customers would be difficult for a single bank. In this environment, banks would start to collaborate to pool non-differentiated activities using private cloud computing within a closed group of banks in a similar way to telecommunication sharing network infrastructure. Sardet (2012) notes that these bundling could provide shared services that interact with customers in more engaging ways while simultaneously freeing banks from the burden of routine transactions. Thus, when the transaction volumes decline, this collaboration could enable banks to stop duplicating investment, industrialize their security processes, for economies of scale, gain new service options, and have immediate access to the latest apps. These

collaborative private clouds could even be hybrid cloud powered by a third party increasing the benefits of cost and flexibility
