

Rudiments of radar

- Fundamentally, the radar consists of transmitter and a receiver
- It works by generating EM waves that is radiated into space by an antenna. A portion of the EM waves is intercepted by the TARGET and re-radiated. The re-radiated waves is collected by the radar receiver antenna and passed on to a receiver where it is processed and displayed.

Advances in Heuristic Signal Processing and Applications Amitava Chatterjee, Hadi Nobahari, Patrick Siarry, 2013-06-05

There have been significant developments in the design and application of algorithms for both one dimensional signal processing and multidimensional signal processing namely image and video processing with the recent focus changing from a step by step procedure of designing the algorithm first and following up with in depth analysis and performance improvement to instead applying heuristic based methods to solve signal processing problems In this book the contributing authors demonstrate both general purpose algorithms and those aimed at solving specialized application problems with a special emphasis on heuristic iterative optimization methods employing modern evolutionary and swarm intelligence based techniques The applications considered are in domains such as communications engineering estimation and tracking digital filter design wireless sensor networks bioelectric signal classification image denoising and image feature tracking The book presents interesting state of the art methodologies for solving real world problems and it is a suitable reference for researchers and engineers in the areas of heuristics and signal processing

RADAR is an object detection system which uses radio waves to determine the range altitude direction or speed of objects The radar dish or antenna transmits pulses of radio waves or microwaves which bounce off any object in their path Arduino is a single board microcontroller to make using electronics in multidisciplinary projects more accessible This project aims at making a RADAR that is efficient cheaper and reflects all the possible techniques that a radar consists of

The Electronics Handbook Jerry C. Whitaker, 2018-10-03

During the ten years since the appearance of the groundbreaking bestselling first edition of The Electronics Handbook the field has grown and changed tremendously With a focus on fundamental theory and practical applications the first edition guided novice and veteran engineers along the cutting edge in the design production installation operation and maintenance of electronic devices and systems Completely updated and expanded to reflect recent advances this second edition continues the tradition The Electronics Handbook Second Edition provides a comprehensive reference to the key concepts models and equations necessary to analyze design and predict the behavior of complex electrical devices circuits instruments and systems With 23 sections that encompass the entire electronics field from classical devices and circuits to emerging technologies and applications The Electronics Handbook Second Edition not only covers the engineering aspects but also includes sections on reliability safety and engineering management The book features an individual table of contents at the beginning of each chapter which enables engineers from industry government and

academia to navigate easily to the vital information they need This is truly the most comprehensive easy to use reference on electronics available

Radio Wave Propagation Chas. R. Burrows,2013-10-22 Radio Wave Propagation Consolidated Summary Technical Report of the Committee on Propagation of the National Defense Research Committee presents all the scientific information and report of experiments This book discusses the problems encountered in the propagation of radio waves Organized into three volumes this book begins with an overview of the technical developments in the study of tropospheric propagation This text then outlines the general theory of standard and nonstandard propagation together with descriptions and results of transmission experiments designed to test the theory Other chapters consider the more unusual problems concerning the radar behavior of targets This book discusses as well the problems of radio wave propagation in the standard atmosphere at frequencies above 30 megacycles The final chapter deals with the selection and utilization of local terrain features that affect propagation and the performance of equipment This book is a valuable resource for scientists and engineers in the field of radio wave propagation

Introduction to Radar Systems Merrill Ivan Skolnik,1962 Since the publication of the second edition of Introduction to Radar Systems there has been continual development of new radar capabilities and continual improvements to the technology and practice of radar This growth has necessitated the addition and updating of the following topics for the third edition digital technology automatic detection and tracking doppler technology airborne radar and target recognition The topic coverage is one of the great strengths of the text In addition to a thorough revision of topics and deletion of obsolete material the author has added end of chapter problems to enhance the teachability of this classic book in the classroom as well as for self study for practicing engineers

Ubiquitous Positioning and Mobile Location-Based Services in Smart Phones Chen, Ruizhi,2012-06-30 Many smart phone users reap the benefits of location based services While tracking users positions using their smart phone is an issue of concern for some others who use Foursquare or rely on their Android GPS view location based services as a necessity Ubiquitous Positioning and Mobile Location Based Services in Smart Phones explores new research in smart phones with an emphasis on positioning solutions in smart phones smart phone based navigation applications mobile geographical information systems and related standards

Robotic Sailing Alexander Schlaefer,Ole Blaurock,2011-07-15 While sailing has a long tradition both as a means of transportation and as a sport robotic sailing is a fairly new area of research One of its unique characteristics is the use of wind for propulsion On the one hand this allows for long range and long term autonomy On the other hand the dependency on changing winds presents a serious challenge for short and long term planning collision avoidance and boat control Moreover building a robust and seaworthy sailing robot is no simple task leading to a truly interdisciplinary engineering problem These proceedings summarize the state of the art as presented at the International Robotic Sailing Conference 2011 Following an overview of the history of autonomous sailing a number of recent boat designs is presented ranging from small one design boats to vessels built to

cross the Atlantic Ocean Subsequently various aspects of system design and validation are discussed further highlighting the interdisciplinary nature of the field Finally methods for collision avoidance localization and route planning are covered
