### **Computational Genetic Regulatory Networks: Evolvable, Self-organizing Systems** Johannes F. Knabe,2012-08-14

Genetic Regulatory Networks GRNs in biological organisms are primary engines for cells to enact their engagements with environments via incessant continually active coupling In differentiated multicellular organisms tremendous complexity has arisen in the course of evolution of life on earth Engineering and science have so far achieved no working system that can compare with this complexity depth and scope of organization Abstracting the dynamics of genetic regulatory control to a computational framework in which artificial GRNs in artificial simulated cells differentiate while connected in a changing topology it is possible to apply Darwinian evolution in silico to study the capacity of such developmental differentiated GRNs to evolve In this volume an evolutionary GRN paradigm is investigated for its evolvability and robustness in models of biological clocks in simple differentiated multicellularity and in evolving artificial developing organisms which grow and express an ontogeny starting from a single cell interacting with its environment eventually including a changing local neighbourhood of other cells These methods may help us understand the genesis organization adaptive plasticity and evolvability of differentiated biological systems and may also provide a paradigm for transferring these principles of biology s success to computational and engineering challenges at a scale not previously conceivable *Syllabus Outline of Course on*

*Management and Organizational Behaviour* , *Distributed Decision Making* Jens Rasmussen,Berndt Brehmer,Jacques Leplat,1991-08-26 Frequently and often inappropriately decision making in the work environment has been analyzed and modeled in terms of isolated decisions made by one person In reality decision making is a continuous interpersonal process usually involving several decision makers aiming at dynamic and cooperative control of the state of affairs at work Based on original contributions from researchers and research teams this book provides an urgently needed cognitive approach to models of distributed decision making exploring the basis for design of decision support systems in various complex collective modern work environments It identifies the state of the art of modeling distributed decision making and the problems imposed by modern high tech systems A also formulates promising research avenues **Biology: How Life**

A Teacher's Right to a Private Life Todd A. DeMitchell, Richard Fossey, 2025-11-13 Do American professional public school teachers have the same rights to a private life as other citizens This is an astute and incisive analysis of every teacher's dual life as responsible exemplars to society's youth and as their own professional and private selves Using historical and legal analysis to capture the tension between these two guises it explores the balance between the weight of expectation from teachers' communities on one hand and the need for autonomy in professional environments on the other A Teacher's Private Life explores some of the core questions that surround this debate what kind of out of school behaviour should constitute dismissal and what should be protected To what extent should teachers serve as role models adhering to the values of the community in which they work How does the special position of trust and responsibility enjoyed by teachers weigh up against their liberty to fashion a life for themselves Should their private lives be subject to greater scrutiny than those in other professions This is an enlightening guide for education and legal scholars local and state level policymakers community leaders on how the legal framework around these core issues has emerged and evolved over time

**Improving Air Safety through Organizational Learning** Mr José Sánchez-Alarcos Ballesteros, 2012-10-01 The key theme of this book is organizational learning and its consequences for the field of aviation safety Air safety rates have been improving for a long time demonstrating the effects of a good learning model at work However the pace of improvement has almost come to a standstill Why is this Many safety improvements have been embodied in technology New devices and procedures appear almost daily yet the rate of air safety improvement has dragged in recent years Improving Air Safety through Organizational Learning explains this situation as being the consequence of a development model supported chiefly by information technology being introduced as an alternative to human operators This is not a book about the convenience of including or not including IT in aviation but an open discussion about the adequacy and risks of some practices in the field Two different but complementary issues emerge Firstly a real improvement in air safety requires a different approach since the present one seems now to be exhausted Secondly the current approach has powerful economic roots and any new approach must deal with this fact improving safety rates without becoming financially damaging Consequently the book is divided into two parts Part one deals with the issue of the present learning model organizing the conclusions around accident reports that show themselves the existence of a problem the present use of technology makes the system better at doing things already known while at the same time it makes the whole system worse at dealing with unplanned situations Part two suggests a new development model one that makes strong use of technology but at the same time questions every step what knowledge will disappear from the system and what is the potential effect of that loss

their disinclination against regulating voluntary membership organizations in a constraining or permissive fashion this framework is empirically tested Applying Qualitative Comparative Analysis QCA the comparative analysis identifies three main paths accounting for the relative constraints in the legal environments democracies have created for organized civil society defined by different configurations of political systems democratic history their legal family and voluntary sector traditions Providing the foundation for a mixed methods design three ideal typical representatives of each path Sweden the UK and France are selected for the in depth study of these legal environments long term evolution to capture reform dynamics and their drivers that have shaped group and party regulation over many decades
