**Basics of CNC Programming** Pawan Negi, Mangey Ram, Om Prakash Yadav, 2022-09-01 Before the introduction of automatic machines and automation industrial manufacturing of machines and their parts for the key industries were made though manually operated machines Due to this manufacturers could not make complex profiles or shapes with high accuracy As a result the production rate tended to be slow production costs were very high rejection rates were high and manufacturers often could not complete tasks on time Industry was boosted by the introduction of the semi automatic manufacturing machine known as the NC machine which was introduced in the 1950 s at the Massachusetts Institute of Technology in the USA After these NC machine started to be used typical profiles and complex shapes could get produced more readily which in turn lead to an improved production rate with higher accuracy Thereafter in the 1970 s an even larger revolutionary change was introduced to manufacturing namely the use of the CNC machine Computer Numerical Control Since then CNC has become the dominant production method in most manufacturing industries including automotive aviation defence oil and gas medical electronics industry and the optical industry Basics of CNC Programming describes how to design CNC programs and what cutting parameters are required to make a good manufacturing program The authors explain about cutting parameters in CNC machines such as cutting feed depth of cut rpm cutting speed etc and they also explain the G codes and M codes which are common to CNC The skill set of CNC program writing is covered as well as how to cut material during different operations like straight turning step turning taper turning drilling chamfering radius profile profile turning etc In so doing the authors cover the level of CNC programming from basic to industrial format Drawings and CNC programs to practice on are also included for the reader

**Modernization** Aaron Lee Doody, Massachusetts Institute of Technology. Department of Mechanical Engineering, 2007 A large format CNC router has been stored in the Pappalardo Laboratory wood shop for several years in an unusable state A need assessment determined that it would be cost effective to bring the router online for use in the mechanical engineering curriculum The router was cleaned and inspected it was determined that the router was in sound mechanical condition The stepper motors control system and power supply were also functional but the CNC interface software was outdated To ensure the long term viability of the router as an effective teaching tool the most cost effective solution was to upgrade the motors control system and CNC interface software using a package provided by the original supplier Techno Isel Inc The motors control system and software were installed bringing the router to a fully functional state Dust and ejected cuttings cause a safety hazard and cleanliness problem when operating the router An enclosure was designed and installed in order to trap the majority of debris and reduce noise levels in the workspace and a brief user guide has been compiled to ensure safe and effective usage
