BGP Design and Implementation Randy Zhang, Micah Bartell, 2003-12-12 This is the eBook version of the printed book. If the print book includes a CD ROM this content is not included within the eBook version. Learn practical guidelines for designing and deploying a scalable BGP routing architecture. Up to date coverage of BGP features like performance tuning, multiprotocol BGP, MPLS, VPN and multicast BGP. In depth coverage of advanced BGP topics to help design a complex BGP routing architecture. Practical design tips that have been proven in the field. Extensive configuration examples and case studies. BGP Design and Implementation focuses on real world problems and provides not only design solutions but also the background on why they are appropriate and a practical overview of how they apply into a top down design. The BGP protocol is being used in both service provider and enterprise networks. The design goals of these two groups are different leading to different architectures being used in each environment. The title breaks out the separate goals and resulting solutions for each group to assist the reader in further understanding different solution strategies. This book starts by identifying key features and functionality in BGP. It then delves into the topics of performance tuning, routing policy development and architectural scalability. It progresses by examining the challenges for both the service provider and enterprise customers and provides practical guidelines and a design framework for each. BGP Design and Implementation finishes up by closely looking at the more recent extensions to BGP through Multi Protocol BGP for MPLS, VPN, IP Multicast, IPv6 and CLNS. Each chapter is generally organized into the following sections: Introduction, Design and Implementation Guidelines, Case Studies and Summary.

Versatile Routing and Services with BGP
Alcatel-Lucent, Colin Bookham, 2014-01-29 Design a robust BGP control plane within a secure scalable network for smoother
services A robust Border Gateway Protocol setup is vital to ensuring reliable connectivity an essential capability for any
organization The Internet has become a necessary always on service in homes and businesses and BGP is the protocol that
keeps communication flowing But BGP also has become crucial to delivery of intra domain business services But the network
is only as reliable as BGP so service enablement depends upon making BGP more stable reliable and service rich Alcatel
Lucent Service Router Operating System is engineered to bear the load of the most demanding networks The system features
support for Symmetric Multiprocessing and unprecedented depth of advanced routing features all within a single OS that s
supported across the entire Alcatel Lucent IP MPLS router portfolio Versatile Routing and Services with BGP provides
guidance toward implementation of BGP within SR OS and details the use and control of each feature The book provides in
depth coverage of topics such as BGP MPLS IP VPN VPLS VPWS Labeled Unicast IPv4 reconvergence and multicast Security
graceful restart and error handling IPv6 PE 6PE and IPv6 extensions to BGP MPLS IP VPN A look at forthcoming features

such as Ethernet VPN Basic BGP competency is assumed but the book is accessible even to those with zero familiarity with Alcatel Lucent s SR OS It underscores the idea that BGP is more than just service enablement and can also be used for infrastructure layer transport but both layers must be solid scalable and able to quickly reconverge Versatile Routing and Services with BGP demonstrates the creation of a robust BGP control plane within a secure network allowing the delivery of flawless uninterrupted service

Internet Routing Architectures Bassam Halabi, Sam Halabi, Danny McPherson, 2000 Explores the functions attributes and applications of BGP 4 Border Gateway Protocol Version 4 the de facto interdomain routing protocol through practical scenarios and configuration examples

BGP Secure Routing Extension (BGP-SRx) Oliver Borchert, 2021 In this paper we first describe the problem space Following that we describe the design and implementation of the NIST reference implementation for RPKI based route origin validation BGP OV and BGPsec path validation BGP PV within a BGP router The system we developed is called BGP Secure Routing Extension BGP SRx We describe the system design explain the design choices communications between all components and present the performance measurements obtained during the implementation stages This paper is organized so that it first explains the high level system design with a brief explanation of all components and how they interact We will explain why we chose this design and provide a discussion of its benefits as well as shortcomings Furthermore we show which open source components we chose and how we extended them for this project The BGP SRx implementation is a reference implementation for RPKI OV with all its router side components as specified in RFC 6811 RFC 6810 and RFC 8210 as well as for BGPsec path validation as specified in RFC 8205 and RFC 8608 The implementation allowed early identification of issues while the specifications were still under development hence provided important feedback to the development of the different IETF RFCs
