Four Quadrant Dc Motor Speed Control Using Arduino 1:

DC Motor Control - A case study MOHAMMED ASLAM HUSAIN,2018-11-20 In this book the four quadrant speed control system for DC motor has been studied and constructed To achieve speed control an electronic technique called pulse width modulation is used which generates high and low pulses These pulses vary in the speed of the engine For the generation of these pulses a microcontroller is used It is a periodic change in the program Different speed grades and the direction are depended on different buttons The experiment has proved that this system is higher performance Speed control of a machine is the most vital and important part of any industrial organization This paper is designed to develop a four quad speed control system for a DC motor using microcontroller The engine is operated in four quadrants ie clockwise counterclockwise forward brake and reverse brake It also has a feature of speed control The four quadrant operation of the dc engine is best suited for industries where engines are used and as a requirement they can rotate in clockwise counter clockwise and thus apply brakes immediately in both the directions In the case of a specific operation in an industrial environment the engine needs to be stopped immediately In this scenario this system is very integral The PWM pulses generated by the microcontroller are instantaneous in both directions and as a result of applying the PWM pulses The microcontroller used in this project is from 8051 family Push buttons are provided for the operation of the motor which are interfaced to the microcontroller that provides an input signal to it and controls the speed of the engine through a motor driver IC The speed and direction of DC motor has been observed on digital CRO

IC is connected to the PWM pin 2 of Arduino This book is about controlling motors using Arduinos called Genuinos outside the United States I start with simple direct current DC motors covering turning them on and off controlling their speed and reversing direction I then get into more complicated motors *Driving Motors With Arduino* Marylynn Namur,2021-07-16 Following is the schematic diagram of the DC motor interface to the Arduino Uno board Pin IN1 of the IC L298 is connected to pin 8 of Arduino while IN2 is connected to pin 9 These two digital pins of Arduino control the direction of the motor The EN A pin of IC is connected to the PWM pin 2 of Arduino This book is about controlling motors using Arduinos called Genuinos outside the United States I start with simple direct current DC motors covering turning them on and off controlling their speed and reversing direction I then get into more complicated motors Experimental Implementation of Motor Speed Control Using Arduino Platform Dawina Ibrahim,2017 *Grants Easy Access To Motor Control Using Arduino* Mila Cavicchi,2021-03-20 Arduino in the US and recently Genuino outside the US a development platform that is easy to use inexpensive and has a large and active community This guide will show you just how easy it is to control motors with Arduino This book is about controlling motors using Arduinos called Genuinos outside the United States The author starts with simple direct current DC motors covering turning them on and off controlling their speed and reversing direction He then gets into more complicated motors and discusses two types of stepper motors a type of precision motor that can be used for detailed control of devices like 3D printers CNC routers robot arms etc He also discusses servo motors which are useful for setting positions and brushless motors which are good for high speeds like you might need for drone or model plane propellers fans model boat propellers high speed model cars and any other application that requires high speeds **Motor Driver** Benny Corneluis,2021-07-16 Following is the schematic diagram of the DC motor interface to the Arduino Uno board Pin IN1 of the IC L298 is connected to pin 8 of Arduino while IN2 is connected to pin 9 These two digital pins of Arduino control the direction of the motor The EN A pin of IC is connected to the PWM pin 2 of Arduino This book is about controlling motors using Arduinos called Genuinos outside the United States I start with simple direct current DC motors covering turning them on and off controlling their speed and reversing direction I then get into more complicated motors Design of a Three Phase Four Quadrant Variable Speed Drive for Permanent Magnet Brushless DC Motors Jonas-Yelee Dakora,2016 DC Motor Speed Control Using a Phase-locked Loop Erik Nelson,1975 **Speed Control of DC Motor Using PI Controller** Mohd Azri Abd Mutalib,2008 The development of technologies affects the demands of industries at the present time Thus automatic control has played a vital role in the advance of engineering and science In today s industries control of DC motors is a common practice Therefore implementation of DC motor controller is required There are many types of controller that can be used to implement the elegant and effective output One of them is by using a PI controller PI stands for Proportional and Integral Controllers which are designed to eliminate the need for continuous operator attention thus provide automatic control to the system Cruise control in a car and a house thermostat are common examples of how controllers are used to

automatically adjust some variable to hold the measurement or process variable at the set point This project is focusing on implementing PI controller to control speed of a dc motor The overall project is divided into two parts The first part is concern on the simulation using MATLAB simulink where the dc motor is modeled and PI controller is tuned using Ziegler Nichols rules and software tuning The second part is implementing the simulation This part is divided into another two parts Graphical User Interface GUI development and hardware interfacing GUI is built using National Instrument LabVIEW software with implementation of PI controller An oscilloscope also had been build there Hardware interfacing part is built with Mitsumi dc mini motors M31E 1 Series speed sensor and analog to digital converter DAC8032 As the result PI controller is capable to control the speed of dc motor followed the result from simulation

Speed Control of DC Motor by Using Fuzzy Logic Controller Khairul Afiq Zakaria,2012 The automatic control has played a vital role in the advance of engineering and science Nowadays in industries the control of direct current DC motor is a common practice thus the implementation of DC motor of controller speed is important The main purpose of motor speed control is to keep the rotation of the motor at the present speed and to drive a system at the demand speed The DC Series Wound Motor is very popular in industrial application and control systems because of the high torque density high efficiency and small size The main purpose of this project is to control speed of DC Series Wound Motor using four controllers which are PID PI P and Fuzzy Logic Controller FLC Initially all the controllers are developed by using MATLAB simulink model In this project PID PI and P controller are developed and tuned in order to get faster step response and the Fuzzy Logic Controller FLC is design based on the membership function and the rule base The expectation of this project is the Fuzzy Logic Controller will get the best performance compared to other controllers in terms of settling time T_s rise time T_r peak time T_p and percent overshoot %OS Finally a GUI of these controllers are developed which allow the users to select any controller and change its parameters according to the different conditions under loaded and unloaded scenarios

Direction and Speed Control of DC Motor Norfadilah Zulkefli,2012 Direct current motor is an important drive configuration for many applications across a wide range of powers and speeds It have variable characteristics and used extensively in variable speed drives The goals of this project are to control the direction and speed of Direct Current DC motor The Radio Frequency RF modules also used to make this project as a user friendliness to control the interface yet make it more useful This project divided into two part of circuit First circuit is for transmitter and another circuit is for the receiver Pulse Width Modulation PWM technique is used where its signal is generated by PIC 18F4550 The PWM signal will send to the motor driver to vary the voltage supply to the motor in a desired speed The DC Motor driver L293D is used in this project as it is a component that has dual full bridge driver where it also can control the direction of the DC motor A rotary encoder plate is coupled to the end of motor shaft to provide the feedback speed signal to the controller The RF modules used here are NT T10A for transmitter module and CWC 12 for the receiver module Four push buttons are built at the transmitter side as switches to control the speed and direction of DC

motor The four switches are interfaced to the RF transmitter module through PIC 18F4550 16 x 2 Liquid Crystal Display LCD Modules is added at receiving side It functions to display the outputs or corresponding action that obtain from the PIC 18F4550 In conclusion the direction and speed of DC motor can be controlled Plus this motor controller can be applied as a basis in roboting system kid s toys and also industrial field

Development of P Resonant Current Control for DC Motor by Using Arduino ,2014 *DC Motor Speed Control Using SCR Chopper* John Y. H. Chen,1977 *Design of DC Motor Speed Controller Using Microcontroller* ,2011 *D.C. Motor Speed Control Using Phaselock Technique* Chih Hsin Liu,1975 *DC Motor Speed Control Using Logic Controller* ,2014 **Background, Proceedings and Repercussions of the July PSUC Trials in Barcelona** ,1952 **Speed Control of Dc Motor Using Pwm Technique** Surajit Das Barman,Abrar Hussain,Toufiq Ahmed,2012-06 Direct current DC motors have variable characteristics and are used extensively in variable speed drives DC motor can provide a high starting torque and it is also possible to obtain speed control over wide range Why do we need a seed motor controller For example if we have a DC motor in a robot if we just apply a constant power to each motor on a robot then the poor robot will never be able to maintain a steady speed It will go slower over carpet faster over smooth flooring slower up hill faster down hill etc So it is important to make a controller to control the speed of DC motor in desired speed DC motor plays a significant role in modern industrial These are several types of applications where the load on the DC motor varies over a speed range These applications may demand high speed control accuracy and good dynamic responses In home applications washers dryers and compressors are good example In automotive fuel pump control electronic steering control engine control and electric vehicle control are good examples of these In aerospace there are a number of applications like centrifuges pumps robotic arm controls gyroscope controls and so on
