Covello,Lester B. Lave,Alan Moghissi,V.R.R. Uppuluri,2013-03-08 The subject of this volume uncertainties in risk assessment and management reflects an important theme in health safety and environmental decision making Most technological hazards are characterized by substantial uncertainty Recent examples include nuclear waste disposal acid rain asbestos in schools carcinogens in food and hazardous waste dealing with such uncertainty is arguably the most difficult and challenging task facing risk assessors and managers today Four primary sources of uncertainty in risk assessment and management can be identified 1 uncertainties about definitions 2 uncertainties about scientific facts 3 uncertainties about risk perceptions and attitudes and 4 uncertainties about values Uncertainties about

definitions derive primarily from disagreements about the meaning and interpretation of key concepts such as probability  
Uncertainties about scientific facts derive primarily from disagreements about failure modes the probability and magnitude  
of adverse health or environmental consequences cause and effect relationships dose response relationships and exposure  
patterns Uncertainties about risk perceptions and attitudes derive primarily from disagreements about what constitutes a  
significant or acceptable level of risk Uncertainties about values derive primarily from disagreements about the desirability  
or worth of alternative risk management actions or consequences The papers in this volume address each of these sources of  
uncertainty from a variety of perspectives Reflecting the broad scope of risk assessment and risk management research the  
papers include contributions from safety engineers epidemiologists toxicologists chemists biostatisticians biologists decision  
analysts economists psychologists political scientists sociologists ethicists and lawyers

*Lees' Loss Prevention in the Process Industries* Frank Lees, 2005-01-10 Over the last three decades the process industries have grown very rapidly with corresponding increases in the quantities of hazardous materials in process storage or transport Plants have become larger and are often situated in or close to densely populated areas Increased hazard of loss of life or property is continually highlighted with incidents such as Flixborough Bhopal Chernobyl Three Mile Island the Phillips 66 incident and Piper Alpha to name but a few The field of Loss Prevention is and continues to be of supreme importance to countless companies municipalities and governments around the world because of the trend for processing plants to become larger and often be situated in or close to densely populated areas thus increasing the hazard of loss of life or property This book is a detailed guidebook to defending against these and many other hazards It could without exaggeration be referred to as the bible for the process industries This is THE standard reference work for chemical and process engineering safety professionals For years it has been the most complete collection of information on the theory practice design elements equipment regulations and laws covering the field of process safety An entire library of alternative books and cross referencing systems would be needed to replace or improve upon it but everything of importance to safety professionals engineers and managers can be found in this all encompassing reference instead Frank Lees world renowned work has been
