Introduction to Nursing Informatics Pamela Hussey, Margaret Ann Kennedy, 2021-01-04 This significantly revised 5th edition provides nurses with a practical guide to the fundamental concepts of digital health from a nursing perspective Nursing informatics has never been more important as contemporary healthcare continues to experience tremendous technological advances The nursing profession is ideally positioned as a key enabler for the design and adoption of emerging eHealth models of care and quality outcomes The book also features real world examples to illustrate the theory and encourages readers to think critically about their current practices and how they can

potentially integrate relevant theories and techniques into their future practice to advance integrated care

Introduction to Nursing Informatics is designed for use as a primer for practicing nurses and students in undergraduate programs of study and includes contributions from leading international experts who have practiced in the field over a number of years. The information is presented and integrated in a purposeful manner to encourage readers to explore the key concepts of nursing practice: digital health, health information management, and its relationship to informatics.

Public Health Informatics and Information Systems J.A. Magnuson, Paul C. Fu, Jr., 2013-11-29. This revised edition covers all aspects of public health informatics and discusses the creation and management of an information technology infrastructure that is essential in linking state and local organizations in their efforts to gather data for the surveillance and prevention. Public health officials will have to understand basic principles of information resource management in order to make the appropriate technology choices that will guide the future of their organizations. Public health continues to be at the forefront of modern medicine given the importance of implementing a population based health approach and to addressing chronic health conditions. This book provides informatics principles and examples of practice in a public health context. In doing so it clarifies the ways in which newer information technologies will improve individual and community health status. This book's primary purpose is to consolidate key information and promote a strategic approach to information systems and development making it a resource for use by faculty and students of public health as well as the practicing public health professional. Chapter highlights include: The Governmental and Legislative Context of Informatics, Assessing the Value of Information Systems, Ethics, Information Technology and Public Health, and Privacy, Confidentiality and Security. Review questions are featured at the end of every chapter. Aside from its use for public health professionals, the book will be used by schools of public health, clinical and public health nurses and students, schools of social work, allied health and environmental sciences.

Service Orientation in Holonic and Multi-Agent Manufacturing Control Theodor Borangiu, André Thomas, Damien Trentesaux, 2012-03-26. Service orientation is emerging nowadays at multiple organizational levels in enterprise business and it leverages technology in response to the growing need for greater business integration, flexibility, and agility of manufacturing enterprises. The Service Oriented Architecture (SOA) analysed throughout the book represents a technical architecture, a business modelling concept, a type of infrastructure, an integration source, and a new way of viewing units of automation within the enterprise. The primary goal of SOA is to align the business world with the world of information technology in a way that makes both more effective. The service value creation model at enterprise level consists of using a Service Component Architecture for business process applications based on entities which handle services. In this view, a service is a piece of software encapsulating the business control logic or resource functionality of an enterprise entity that exhibits an individual competence and responds to a specific request to fulfil a local operation or global objective. The value creation model is based on a 2 stage approach. Agentification: complex manufacturing processes are split in services provided by informational agents which are

discovered accessed and executed This leads to a modular reusable agile and easy integrate integration Holonification holons link the material flow and physical entities of the manufacturing processes with the informational part IT services realized by distributed intelligence facilitating thus traceability the developing of flexible control systems This book gathers contributions from scientists researchers and industrialists on concepts methods frameworks and implementing issues addressing trends in the service orientation of control technology and management applied to manufacturing enterprise This book gathers contributions from scientists researchers and industrialists on concepts methods frameworks and implementing issues addressing trends in the service orientation of control technology and management applied to manufacturing enterprise
