Parametric Analysis, Generative Design, and Machine Learning for Architects Victor Okhoya, Marcelo

Bernal, 2024-12-17 Let these cutting edge tools revolutionize your architectural problem solving Recent technological advances including rapid development of high performance computing power have produced computational tools for architects and designers that are swiftly revolutionizing the field Two of these tools parametric analysis and generative design can be used together to model complex problems and test solutions with extraordinary speed and efficiency The next generation of architects and designers will bring these tools to bear in a transformed professional landscape Parametric Analysis and Generative Design in Architectural Practice offers a detailed introduction to these tools and their applications Balancing theory and practice it is replete with useful examples and provides algorithms for three different architectural scales urban design building design and interior design A foundational discussion on machine learning in architectural practice is presented along with examples of machine learning applications for energy analysis and solar analysis It is a must own for architects looking to leverage an unprecedented level of computational power The book also includes Detailed guidelines for building performance simulation for energy analysis and daylight analysis Algorithms for scales from interiors to buildings to entire cityscapes Discussion of how to implement machine learning in order to solve complex problems Parametric Analysis and Generative Design in Architectural Practice is ideal for professionals and students at every level looking to diversify their architectural toolkit

Parametric Design in Architecture Birkhauser Verlag GmbH, 2013 This book explains parametric design shows how it works and focuses on its functional advantages and practical applications The author Carlos R Barrios is an architect with a background in computer science and fine arts He has accompanied the development of parametric design at MIT in Cambridge and in cooperation with large practices such as SOM KPF and Foster Partners and has conveyed the principles and applications for many years in teaching Systematically structured illustrated with international built examples and instructive drawings by the author this book provides a thorough point of reference on a complex subject

Architectonics and Parametric Thinking Frank Jacobus, Angie Carpenter, Rachel Smith Loerts, Antonello Nunzio, Francesco Bedeschi, 2023-07-12 This book is an approachable guide for students and professionals to learn

parametric modeling through the lens of architectonics allowing readers to pair fundamental ideas about architecture with parametric thinking Architectonics and Parametric Thinking begins by clearly positioning the potentials of parametric design through a series of chapters written by leaders in their respective industries This helps to situate the vast potential of parametric softwares allowing the reader to understand the full range of what is made possible by working computationally Following this theoretical introduction the book presents a manual that walks readers through the step by step construction of parametric modeling scripts built through an architectonic lens using clear compelling diagrams Each of these diagrams provide textual accompaniment that describes how each new portion of the script is transforming the algorithm as a whole as well as diagrams that show the physical transformation that is taking place as a result of the script s evolution Parametric modeling is radically transforming the design disciplines and will become the primary way designer s generate new products moving forward Written and expertly designed for architecture students and professionals this book provides an interactive approach to teaching the basics of parametric thinking in relation to architecture and design *From Control to Design* Tomoko Sakamoto,Albert Ferré,2008 This book presents six independent practices that explore current applications of parametric and algorithmic design techniques in architectural production If the first generation of digital modeling programs allowed designers to conceive new forms and design processes a new breed of digital techniques is today being discussed for their ability to allow these forms once conceived to be controlled and realized The question today is how these techniques affect architectural practice What is their future and what potentials do they offer to the discipline BOOK JACKET

Digital & Parametric Architecture Carlo Aiello,2014 This issue of Evolo explores the development of the latest digital tools used in the designing and making of architecture including advance modeling software and computer aided design

Parametric Practices David Jason Gerber,Harvard University. Graduate School of Design,Harvard University. Graduate School of Design. Doctor of Design Program,2007 **Inside Smartgeometry** Terri Peters,Brady Peters,2013-08-12

Smartgeometry SG is a key influence on the architectural community who explore creative computational methods for the design of buildings An informal international network of practitioners and researchers the group meets annually to experiment with new technologies and collaborate to develop digital design techniques When SG was founded in 2001 by London based architects and friends Hugh Whitehead Foster Partners J Parrish AECOM and Lars Hesselgren PLP there was little in the way of parametric tools for architecture SG was founded to encourage the development discussion and experimentation of digital design techniques driven by design intent rather than on construction specifications SG calls for a re consideration of the design process where the creation of computational mechanisms become an integral part of designing not a task done prior to or separate from the process In the early years of the workshops this need for new ways of design thinking led to the development of Bentley s GenerativeComponents software In recent years the ecology of these design environments has diversified to include multiple software platforms as well as innovative fabrication techniques and

interactive environments SG has grown accordingly from a handful of experts to an international network of designers who are defining the future of design Founded by digital pioneers it creates the algorithmic designers of the future Inside Smartgeometry can be seen as a retroactive manifesto for SG examining and contextualising the work of the SG community the digital spaces prototypes and buildings designed using bespoke tools created in response to architectural ideas From interactive crowd sourcing tools to responsive agent based systems to complex digitally fabricated structures it explores more than a decade of advances that have been influential for architecture Through 23 original texts including reflections by the founders and key contributors such as Robert Aish Martin Bechthold Mark Burry Chris Williams and Robert Woodbury the book offers a critical state of the art of computational design for architecture Many international design and engineering firms have participated in SG and the book includes chapters by practitioners from offices such as CASE Design2Production Foster Partners Grimshaw Populous and SOM

The Politics of Parametricism Matthew Poole, Manuel Shvartzberg, 2015-10-22 Explores the social and political consequences of the rise of parametric digital design as both a style and a working process in architecture and urbanism *Processes of making* Kathrin M. Wiertelartz, 2016-01-01

Computational methods in design practice are powerful tools for solving highly constrained problems and for refining existing design solutions Algorithmic tools can help in the design process and significantly extend the range of possible solutions The automation of many routines and the repetitive activities of the design process both provide a release for an architect allowing him or her more time to think about the design The main goal of this research study is to explore the potential of parametric modeling for dynamically resolving and controlling the particular conditions of the design and manufacturing processes The vision is to be able to approach this process in general by way of several design systems for the construction of architectural models and finally to build up life sized solutions
