

TEORÍA DEL APRENDIZAJE DE PIAGET:

La teoría del aprendizaje de Piaget explica cómo los niños desarrollan su inteligencia y cómo el conocimiento evoluciona a través de diferentes etapas cognitivas.

1

2

ETAPAS DEL DESARROLLO COGNITIVO

- **Etapa sensoriomotora (0-2 años):** El niño explora el mundo a través de los sentidos y acciones, desarrollando la permanencia del objeto.
- **Etapa preoperacional (2-7 años):** Desarrollo del lenguaje y pensamiento simbólico, pero con limitaciones en la lógica y la comprensión de otros puntos de vista.
- **Etapa de operaciones concretas (7-11 años):** Los niños comienzan a pensar de manera lógica sobre eventos concretos y a comprender conceptos como la conservación de la cantidad.
- **Etapa de operaciones formales (11 años en adelante):** El pensamiento se vuelve abstracto, permitiendo el razonamiento hipotético y la resolución de problemas complejos.

3

PRINCIPALES CONCEPTOS

- **Esquemas:** Estructuras mentales que organizan el conocimiento.
- **Asimilación y Acomodación:** Procesos mediante los cuales los niños incorporan nueva información (asimilación) o ajustan sus esquemas existentes (acomodación).
- **Equilibrio:** El proceso de búsqueda de un equilibrio entre asimilación y acomodación.

4

IMPLICACIONES EDUCATIVAS

- El aprendizaje debe ser activo y basado en la exploración.
- Es importante adaptar las enseñanzas al nivel de desarrollo cognitivo del niño.
- Fomentar el juego y las actividades que estimulen el pensamiento lógico y abstracto.

explore the process whereby possibilities are formed He chooses to understand the possible not as something predetermined by initial conditions rather in his use of the term possibilities are constantly coming into being and have no static characteristics each arises from an event which has produced an opening onto it and its actualization will in turn give rise to other openings In perceiving that a possibility can be realized and in acting upon it the child creates something that did not exist before Volume 2 presents a series of experiments documenting the way children between the ages of four or five and eleven to thirteen come to develop a grasp of necessity and its role in understanding the world about them The experiments show how children proceed from an initial level at four or five years of pseudo necessities where they see the world as necessarily what it appears to be without the existence of possibilities to an intermediate level at six to ten years where pseudo necessities give way to increasingly rich arrays of possibilities and a final stage at eleven to thirteen years where children are able to select among these multiple possibilities the one that fits all the data This stage represents the optimal level of understanding reality which is now seen by the child as infinitely variable yet coherent and lawful Psychologically this lawfulness corresponds to a sense of necessity or certainty
